**2832** Burpee Hybrids are the loveliest zinnias ever created, immense fluffy and ruffled flowers with graceful, curved petals like those of a giant chrysanthemum. Entirely free of the stiffness often associated with zinnias, —they are airy, informal and very much alive with color.

These new giant hybrid zinnias come in a gorgeous range of colors and color combinations,—all those shown on the front cover as well as those shown here and others. Larger than dahlia flowered—the sensation of the garden world this year. Most desirable for garden use and cutting.

## NEW GIANT ZINNIAS—Burpee Hybrids

**2832 Burpee Hybrid Zinnias** are the loveliest new flowers ever created. They include both first and second generation hybrids of all zinnia colors and some colors and combinations of colors never before seen. The color range is spectacular in its brilliance and yet does not contain any harsh colors.

The Burpee Hybrids are large, fluffy and ruffled, bigger than the Dahlia flowered zinnias. They are up to 6 in. across and have attractively curled petals like giant chrysanthemums. Burpee Hybrids are as easy to grow as any zinnias. Just sow the seed outdoors when the soil is warm.

The Burpee Hybrids will be the sensation of the garden world this year. Their glistening beauty will add charm to your garden. Their beauty, stem length and keeping quality will make them one of the most popular of all cut flowers. The plants are strong growing and free blooming, 3 ft. tall.

Just a few of the lovely colors of the Burpee Hybrids are shown on the front cover and inside front cover of this catalog.

## Dear Friends and Fellow Gardeners

This is the Diamond Jubilee of Burpee Seeds. It is seventy-five years since father, at the age of eighteen, gave up his study of medicine and started our seed business.

At first, he had a hard time of it. He lost money for the first two years and he had very little to lose. Then it seemed almost at once people began to realize that here was a man who was trying to serve them with the best seeds that grow.

Business then went ahead. Before father was forty he had the largest mail order seed business in the world and we have held that position ever since.

Many of the varieties father introduced years ago are still the most popular. His second year in business, in 1877, father introduced Surehead cabbage. Golden Bantam sweet corn and Fordhook lima bean are among the many other world famous varieties first introduced by father.

In recent years we have pioneered in the development of hybrid vegetables and flowers. Burpee Hybrid cucumber, Burpee's Big Boy and other hybrid tomatoes, Silver Medal petunia, the Burpee Alldouble petunias and our Marigolds and Snapdragons are favorites of the best gardeners in America today. This year we are introducing the new giant zinnias—Burpee Hybrids—the loveliest new flowers ever created; Riverside Beauty zinnia and Glitters marigold.

Our experimental work never ceases. At Fordhook Farms in Pennsylvania and at the Floradale and Santa Paula Farms in California we constantly work to improve the existing varieties and to create new and better vegetables and flowers for your gardens.

On this, our Diamond Jubilee year, I wish to thank every one of you for your confidence in us. We shall always endeavor to supply you with the best seeds and bulbs.

Because of the uncertain conditions today, I suggest you send us your orders as soon as possible. There is no advance in the price of any vegetable or flower seeds in this Burpee catalog.

Faithfully yours,

*David Burpee*

President

# Luther Burbank Zinnias

2910 Luther Burbank Zinnia Pkt. 25¢

**2910 Luther Burbank Zinnias** are a rare blend of lovely, delicate pastel or art shades comprised of many self colors ranging from cream and primrose through delicate buff-yellow, canary yellow, ivory, soft salmon, warm rose, chamois, apricot, peach, blush pink, salmon-pink to clear, bright rose. There are also unusual two- and three-color combinations of soft and light shades in some of the individual blooms. When an occasional pale lavender or light orange appears, it is always a tone that blends well with the others.

Flowers grow 5 to 5½ in. across, larger than dahlia flowered and are composed of numerous big, flat petals that are massive in effect but not fluffy and ruffled like Burpee Hybrids. Plants are strong growing, 3 to 4 ft. tall, well-branched so that an abundance of long-stemmed flowers is assured for cutting. **Pkt. (100 seeds) 25¢;**

and the flowers themselves are more flattened, being only about 1 in. in depth. Plants are vigorous, well-branched, grow about 3 ft. tall and produce many long, strong flower stems.

*Zinnias, especially Dahlia Flowered, are highly prized for garden display and cutting*

## Giant Dahlia Flowered Zinnias

Dahlia flowered zinnias are outstanding both for the exquisite form of their long-stemmed flowers, which resemble giant dahlias, and for the lovely shades included in their range of color. They grow about 5 in. across and 2 in. and more in depth. The well-branched sturdy plants grow 3 ft. high and bloom most profusely over a long period. Showy in the garden; wonderful for cutting as flowers have remarkable keeping qualities.

**2882 Will Rogers** Loveliest and most brilliant scarlet-red which glistens in the sun with dazzling beauty. Flowers grow larger than other dahlia flowered zinnias, fully double and borne profusely on long, strong stems. Makes a grand showing in the garden, wonderful for exhibition and of great appeal for cutting.

**2901 Canary Bird** A most pleasing shade of primrose-yellow which combines well with the deep shades of Dream or Royal Purple.

**2894 Dream** An unusual tone of deep lavender turning to mallow-purple as the flowers age, a rather rare shade in zinnias.

**2896 Exquisite** Light rose with deeper rose center, creating a most pleasing two-toned color effect which is lovely for cutting.

**2899 Fancy Tints** The combination of colors is most strange; they shade from old rose on the outer petals through gold to a halo of bright cerise in the center. Stems are long; flowers very large.

**2888 Golden Dawn** Appealing golden yellow—almost a light orange shade with a reddish center. Rich and colorful combination.

**2891 Illumination** Enormous flowers of deep tyrian rose—a real beauty, whether seen in the garden or as cut flowers.

**2897 Oriole** Attractive two-toned flowers—golden orange outer petals in contrast to a reddish orange center. Pretty blending.

**2900 Polar Bear** Best of all white zinnias; flowers are borne on long stems. Nice alone or a good mixer with the others.

**2914 Royal Purple** Distinct color in this class—a deep, rich royal purple without any hint of blue. All-America Winner.

**2904 Scarlet Flame** Bright scarlet nicely blended with orange. A vivid color and one that is always in demand for cutting.

# Burpee's Tall Double Annual LARKSPURS

2267 Burpee Wonder Larkspur, White Pkt. 25¢

2153 Giant Imperial Larkspur, Mixed Colors Pkt. 15¢

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. Sow seed early as they like cool weather in which to germinate and to grow best. We offer your choice of four distinct types.

## Burpee Wonder—*Erect, unusually long spikes*

The distinctive feature of these extraordinary larkspurs is their habit of growth. Strong, upright spikes are produced from the base, presenting a solid, erect, column-like appearance, the upper one-third being covered with large double flowers,  $1\frac{1}{2}$  in. across. These extremely long-stemmed larkspurs are especially desirable for all cutting purposes and a row of them in the garden is most striking. They grow about  $3\frac{1}{2}$  ft. tall and stand heat remarkably well. Three splendid colors are available.

2125 **Dark Blue** Rich velvety blue. 2267 **White** Well-formed, glistening white flowers of wonderful clearness.  
2134 **Salmon** Exquisite salmon-rose.

*Any of the above Burpee Wonder Larkspurs:*

## Double Stock Flowered—*Branching type*

Splendid old garden favorite, greatly improved by careful selection for doubleness and size of flowers, new colors and better habit of growth. The stately plants are well branched, and produce many fine spikes closely set with brightly colored, large, double blooms. Showy in beds and borders; lovely for cutting. 3 to 4 ft. tall.

2132 **Azure Blue** Ageratum-blue.  
2127 **Sky Blue** Very bright tone.  
2136 **Blue Velvet** Deep velvety blue.  
2138 **Carmine** Deep carmine-rose.

## Early Giant Hyacinth Flowered

Blooms much earlier than other tall larkspurs. Non-branching, each plant produces one big, hyacinth-like spike, broad at the base and tapering toward the top, thickly studded with perfect double blooms to a length of 18 to 20 in. Spikes are enormous, many rivaling delphiniums. 3 to 4 ft.

2245 **Dark Blue** Deep blue.

See page 51 for Delphiniums (Perennial Larkspur).

# Burpee's Fragrant NASTURTIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil; if overly rich it will cause plants to produce more leaves than flowers. They are most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and semi-tall or dwarf growing. Their varied colors, different shapes and refreshing fragrance make them most desirable for cutting.

## Dwarf Giant Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems, which makes them especially fine for cutting. Eight or more irregularly placed petals give the blooms an unusually artistic appearance. Plants are uniformly dwarf, rounded and covered with flowers. Most attractive in beds, borders, edgings, rock gardens and pots.

**2338 Cherry Rose** An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other variety. Wonderful for cutting; very showy in the garden.

**2306 Delightful** Soft salmon-cerise, upper petals oddly marked crimson-maroon at base. Flowers become deeper salmon-cerise with age.

**2336 Garnet Gem** Deep, rich, very bright garnet-red. The delightfully sweet-scented flowers have enough orange suffusion to enliven them with an iridescent glow that is most pleasing. Striking color.

**2329 Golden Globe** Exquisite, giant double and semi-double, pure golden yellow blooms cover the dwarf globe-shaped plants.

1610  
Burpee Double  
Snapdragon  
Pkt. 35¢;  
2 pkts. 65¢;  
3 pkts. 90¢

First giant, alldouble snapdragons ever grown from seed. Flowers are spectacular, not only for size but for their unusual and amazing formation. They are quite large,  $1\frac{3}{4}$  in. across and  $1\frac{1}{2}$  in. deep when well grown. The upper lip broadens and recures gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement, as well as surprise, to an already handsome flower of unsurpassed quality.

## 1610 BURPEE DOUBLE

Flowers are rich, deep golden yellow throughout, except for the back of the buds which are flushed with rose-pink. When fully open, the pink coloring disappears entirely. The central spike grows about 28 in. tall and flowers first, followed by many lateral branches which come from the main stem near the base of the plant. All the lateral stems bloom at one time so that the plants produce a great mass of color in beds or borders. Besides being valuable for garden effect, Burpee Double Snapdragon is unsurpassed for cutting. In some of the flowers, there is a delicate fragrance.

Pkt. 35¢; 2 pkts. 65¢; 3 pkts. 90¢

## 1608 FLORADEL DOUBLE

Formation of the flowers is similar to Burpee Double, perhaps more double and several shades lighter in color—a soft Dresden yellow. On the unopened buds, there is a pale rosy blush which disappears as soon as they open. Flowers are quite large, with many open at one time and closely placed on strong, stiff spikes. Wonderful for cutting and garden use.  $2\frac{1}{2}$  ft.

Pkt. 40¢; 2 pkts. 75¢; 3 pkts. \$1.00

## 1612 LEMONADE

In addition to a new and pleasingly different form, the immense flowers are of a clear primrose-yellow and nicely placed on long, strong stems. The central spike grows 3 ft. tall and blooms ahead of the laterals, three to five of which arise from the main stems close to the ground. Frequently, the flower-spikes are more than half the height of the plants so that a planting attracts immediate attention. Lemonade is truly a wonderful double snapdragon, either alone or with the others for cutting and garden decoration.

Pkt. 50¢; 2 pkts. 95¢; 3 pkts. \$1.25

# Majestic Snapdragons Semi-Tall Giant Flowered

Plants are compact, bushy, 18 to 24 in. high, and bear many massive, hyacinth-like spikes closely set with flowers as large as those of the Tall Giant type. The spikes are borne well above the foliage, the central one being slightly taller than the others. All are sturdy, upright and strong. Ideal for beds, borders, cut flowers and may be grown in pots.

1704 **Avalanche** Large, handsome, pure white blooms well displayed on heavy spikes.  
1548 **Eldorado** Deep golden yellow of remarkable purity; a favorite for cutting.  
1565 **Purple King** Unusual shade of clear, cattleya-purple; large attractive blooms.  
1541 **Rosamond** Rose-pink delicately suffused soft salmon, giving a luminous effect.  
1731 **All Colors Mixed** The above and other desirable Majestic Snapdragons well blended in a colorful mixture for a grand display in the garden or used as cut flowers.

## SNAPDRAGONS or ANTIRRHINUMS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions are printed on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Burpee's Tetra Snapdragons growing for seed on Floradale Farms in California

## Burpee's Tetra Snapdragons Giant Ruffled Tetraploid Snapdragons

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploid snapdragons for, when examined under the microscope, they have twice the number of chromosomes in their cells as regular or diploid snapdragons. Being tetraploids, plants are exceptionally strong, blooms extremely large.

Many of the individual flowers are distinctly and attractively ruffled. Plants are strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting, and having good substance adds to their keeping value.

**1567 Sunset Hybrids** Pleasing color blend of bronze and yellow shades ranging from primrose-yellow flushed pink to rose suffused orange. Much admired. **Pkt. 35¢; 2 pkts. 60¢**

**1571 Tetra Pink Shades** Exquisite variations from pale shell-pink to deep rose. Tapering spikes well filled with large, nicely formed, well placed flowers. **Pkt. 35¢; 2 pkts. 60¢**

**1568 Tetra White** A slight creamy tinge and primrose throat add to the beauty of the white flowers which turn pure white with age. Always wanted. **Pkt. 35¢; 2 pkts. 60¢**

**Pkt. 25¢; 2 pkts. 45¢; 3 pkts. 60¢; 1/16 oz. \$1.00**

## Giant Skyscraper Snapdragons

Tallest growing of all snapdragons; more flowers per stem, the stems more upright, more rigid and the blooms of the most pleasing shades in the lighter tones. Plants are base branching, with from 3 to 7 strong stems arising from the main stem close to the ground. The central spike grows 3 ft. and more tall followed by the lateral stems of the same or nearly the same height. Spikes are very symmetrical, half or more than half their height is covered with flowers and buds. Each flower is large, held upright and though covered with a profusion of bloom, spikes are not coarse or weighty. Whether in the garden or in cut flower arrangements Skyscraper Snapdragons are equally striking for their distinctive beauty. They were created on Burpee's Floradale Farms.

**1550 Mixed Colors** Glorious blend of mostly the softer shades—sulphur-yellow, primrose-yellow, canary yellow, sulphur-yellow flushed pink, golden yellow with rose tube, apple-blossom-pink, light rose-pink, mid-rose, rose flushed golden, pink delilah, creamy white, creamy white flushed pink with an occasional rosy orange, rosy bronze or a delicate lavender.

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. For earliest blooms, start seed indoors four to six weeks before your usual outdoor planting time.

# HEAT-RESISTANT, SPRING FLOWERING or CUTHBERTSON SWEET PEAS

Come into bloom, outdoors, about 10 days before the Giants and remain in bloom the same length of time. Plants are quite vigorous and produce a heavy crop of large, long-stemmed blooms. Heat-resistant and therefore especially adapted to localities where sweet peas have heretofore been more or less unsuccessful. Under glass they are unusually free flowering and prolong the spring cutting season.

They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. All types of sweet peas prefer an open, sunny location, and deep, rich soil which must be well drained.

# Burpee's Alldouble PETUNIAS

Burpee's Alldouble Petunias are truly gorgeous. The seeds are obtained at such high cost by hand-pollination that they are worth many times their weight in gold. Because seeds are so extremely valuable, extra care should be used in sowing them. Start seeds indoors in shallow boxes, pots or seed-pans eight weeks before your usual outdoor planting time; set young plants in the garden when weather and soil have become warm. All are excellent for beds, borders, window boxes, pot plants and cutting; wherever used, their extraordinary beauty commands instant admiration. These hybrid double petunias are most beautiful.

## Burpee's Hybrid Petunias

These are true first generation ( $F_1$ ) hybrids, the direct result of crossing two distinct parent varieties by hand-pollination. As petunias are practically self-pollinated, it is necessary for our experts to remove the pollen sacs from the flowers of the female parent. After emasculation, pollen is taken from the flowers of the male parent and placed on the stigmas of the females. This carefully controlled crossing by hand of two distinct parent lines is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with larger flowers and considerably more of them per plant. In each case, our hybrid petunias, Silver Medal and Pink Sensation, far surpass either of their parents in all characteristics.

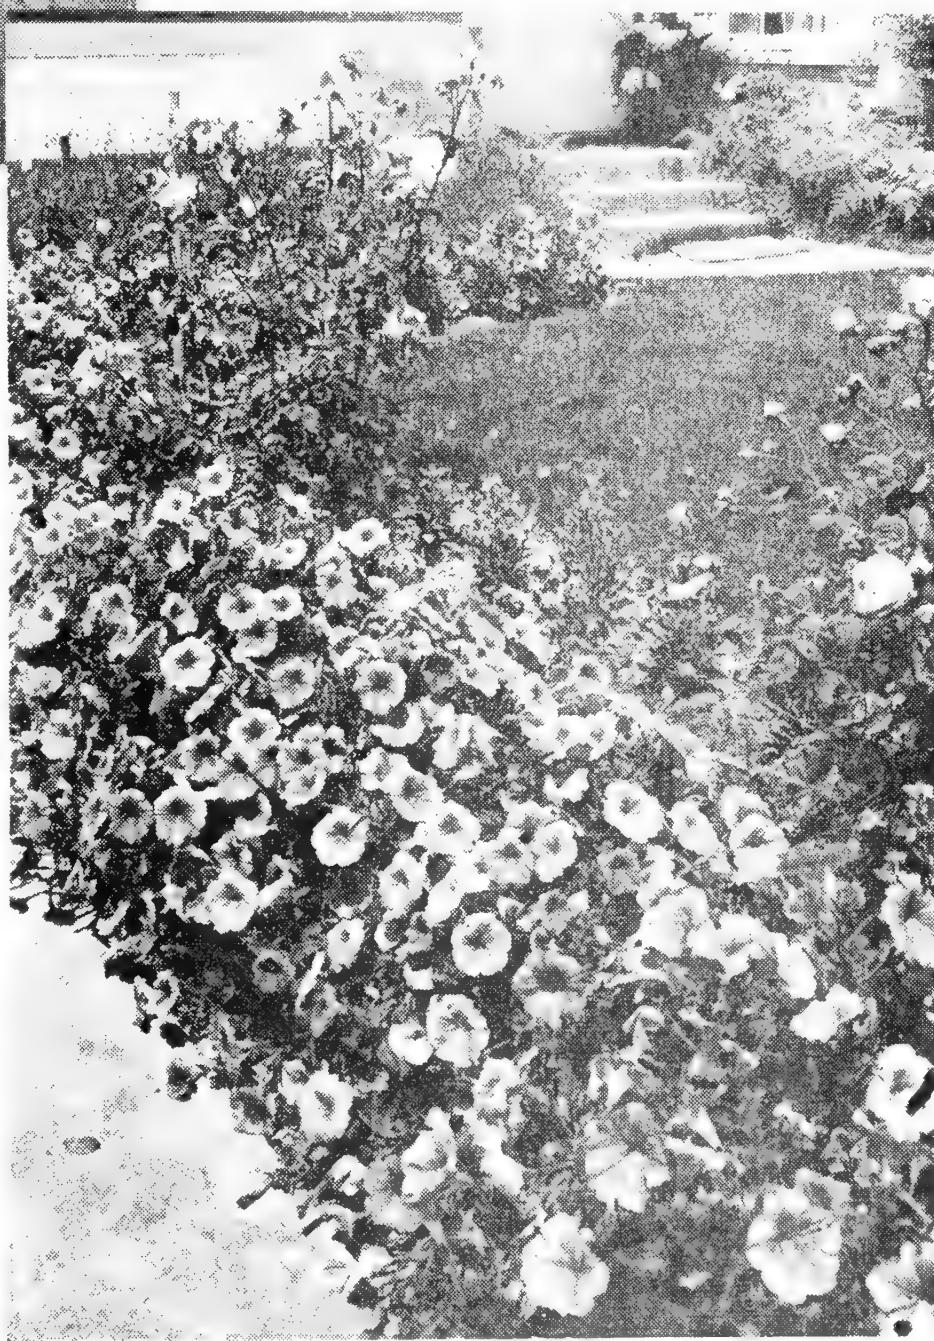

Burpee Hybrid petunias are really outstanding, each having been judged medal winners by America's foremost flower critics in the trials of the All-America Selections. Wonderful for large beds, wide borders and excellent for cut flowers.

# BURPEE PETUNIAS

## COLOSSAL SHADES OF ROSE

### All-America Silver Medal Winner

2466 Burpee's Colossal Shades of Rose are the first giant alldouble petunias ever created in America and the biggest double petunias ever known, many flowers growing over 5 in. across. All are fully double, varying in form from those with crisply fringed petals to nicely ruffled ones.

This variation in flower form adds interest to a planting as does the difference in color, which ranges from salmony pink through rose-pink to deep, rich, rosy mauve—a most attractive blending of rose shades. Plants are strong growing, 20 in. high, spread as much as 3 ft. across and bear their immense alldouble blooms in the greatest profusion. Valuable for beds, borders, window boxes and unexcelled for cutting.

## SILVER MEDAL

### All-America Silver Medal Winner

2499 Burpee's Silver Medal is a true, first generation ( $F_1$ ) hybrid and one of the finest single petunias ever introduced. Flowers, 3 in. across, are borne in the greatest profusion from early summer until frost. When first opening, they are a lustrous salmon-cerise with orange undertone gradually changing to a delightful shade of rich salmon as they mature. Plants are low and bushy, grow 1 ft. tall with a spread of 18 to 20 in.

**Pkt. (100 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35**

## TALLY-HO—New for 1951

2443 Burpee's Tally-ho is a distinct new color in the bedding spreading class of petunias. Flowers grow  $3\frac{1}{4}$  in. across, with large, rounded lobes, bold and well formed. The color is difficult to describe or illustrate—it is quite close to cardinal-red but softened with a definite undertone of salmon-rose and a glowing velvety sheen that gives the flower a deeper appearing shade than it really is. The coloring tends to deepen towards the throat. Plants are vigorous, 1 ft. high with a spread of 18 to 20 in.

# Burpee's Beautiful ASTERS

Asters are easy to grow. They prefer rich, well-drained soil and a warm, sunny location. For earliest blooms, sow seed indoors in boxes or seed-pans four to six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm. A continuous display of flowers from early summer until frost can be had by planting extra early, early and midseason blooming varieties. Asters are wonderful for cutting.

\* Varieties marked with an asterisk (\*) are the Wilt-Resistant Strain.  
They are highly immune to "Wilt disease" or "Stem-rot."

## Burpee's Extra Early Asters

These very early flowering varieties begin to bloom in about 14 weeks after seed is sown—long before most other asters begin to bud. Extreme earliness and good cutting stems make them a most welcome type of aster for the home gardener and the florist. All created by Burpee on Floradale Farms.

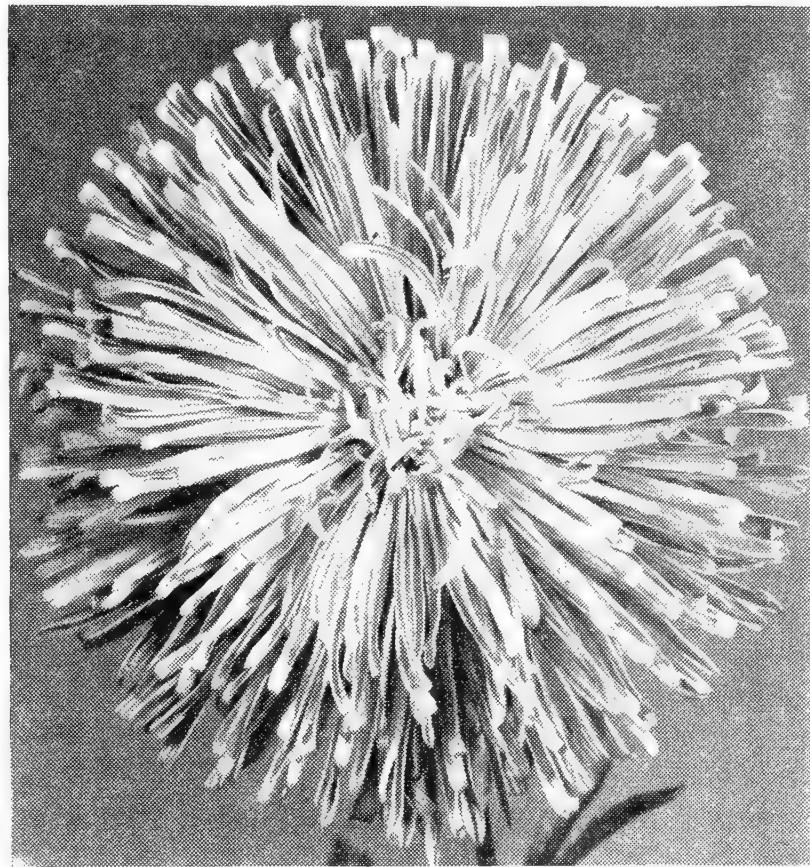

**1607 Heavenly Blue** Large, feathery, beautifully formed flowers, 4 in. and more across, of an exquisite azure or light lavender-blue color. Petals are long, narrow, prettily interlaced, the smaller ones gracefully curling over the center. Plants are of open growth, well branched, vigorous, 2 ft. tall, bloom early; stems up to 16 in. long. Wonderful for cutting.  
Pkt. 25¢; 2 pkts. 45¢; 1/8 oz. 75¢

**1605 Early Bird** First flowers appear very early and the plants will continue to produce their colorful carmine-rose flowers for several weeks. Blooms are double, 3 1/2 in. across, with the petals evenly placed to form a most symmetrical flower. Plants grow 15 in. and more high and branch freely. As flowers age, outer petals become tipped lighter rose.  
Pkt. 25¢; 2 pkts. 45¢; 1/8 oz. 75¢

**1603 Navy Blue** Giant flowered aster; rather close in form to that of the Giant Crego type. The flowers are large, about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich, luminous, deep velvety purple-blue color. Plants grow about 20 in. tall. Attractive.

Perennial Flowers are the hardy permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms.

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the showy golden yellow *Alyssum saxatile compactum*, *Columbine*, *Delphinium* and others, ending the season with the fall *Chrysanthemums*. Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

# BURPEE'S Famous Vegetable Seeds

## Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

## ◎ Follow the Bull's Eye ◎

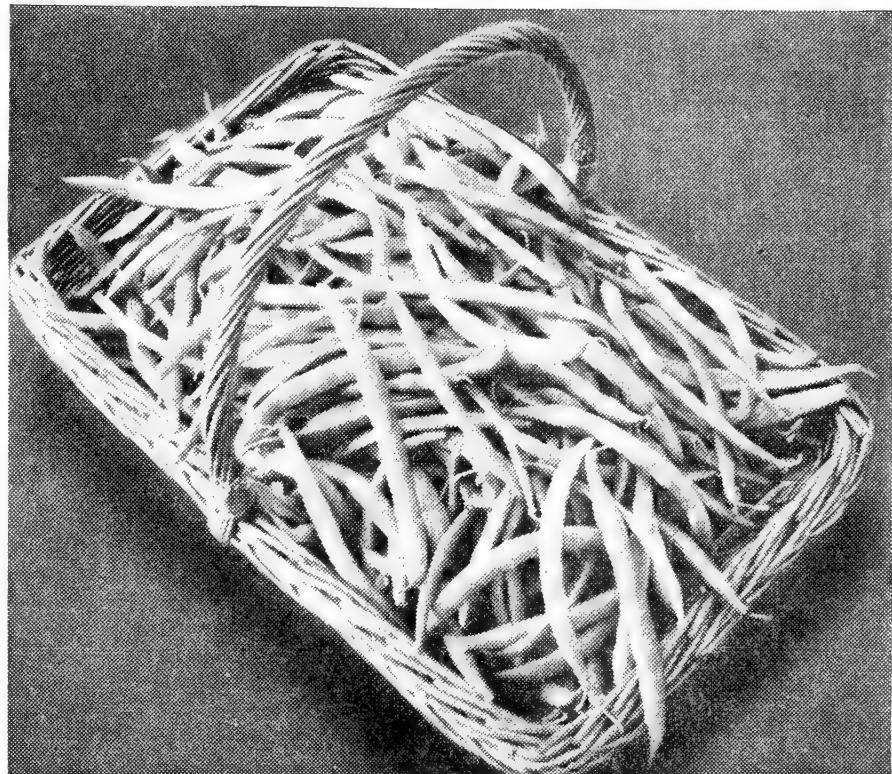

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, ◎, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

# Stringless Green-Pod BUSH BEANS

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we

are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you, and, of course, they taste better.

### THE EFFECT OF SEASON, LOCALITY, ETC.

Tendergreen  
Bush Bean

### How to Grow Bush Snap Beans

Plant seed when danger of frost is past and the soil is warm, in rows 18 to 30 in. apart for hand cultivation or 2½ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall and will bear more pods if you pick them when young at which time they are truly delicious. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

## BUSH SHELL BEANS

*may be used either green or dried*

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The culture is similar to that recommended for bush beans on page 59, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 61, are also desirable as shell beans.

**56 Great Northern** 90 days. Oval, dark green, inedible pods 3 to 4 in. long, filled with white, medium large, dry beans; excellent for boiling, baking and soup.

## GIANT BUTTER or FAVA BEAN

**Mammoth pods with 5 to 7 lima-like beans**

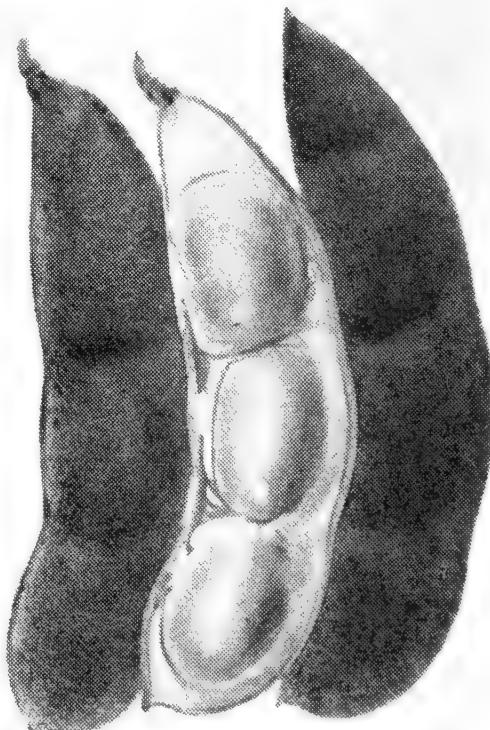

**24 Long Pod** 85 days. Giant Butter or Fava are the well-known Broad Beans, much hardier than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Dry seed is large, circular, flat, reddish brown with black eye. One pkt. is enough for 15 ft. of row; 1 lb. 75 ft. of row.  
**Pkt. 15¢; 1/2 lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.15; 5 lbs. \$2.75**

The plants are erect, bush-like and literally loaded with pods, each containing 2 or 3 oval-shaped, bright green beans which are delicious cooked as green shelled beans. When fully matured, the dried beans are yellow and may be cooked similarly to lima beans. Suitable for freezing. High in proteins and vitamins. Pods are short, fuzzy, not edible, and borne high in the plants which are rigid, upright and grow 2 to 2½ ft. tall. Immune to practically all diseases and insects which commonly attack garden beans. Stands heat and drought and will even do well on poor soil. For green beans, use seeds as soon as they are fully formed. Also known as soja bean. A pkt. will plant 25 ft. of row; 1 lb. 150 ft.

# POLE BEANS

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. Support must be given the vines, which grow 5 to 8 ft. and more high. Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type. The most popular and dependable varieties are Kentucky Wonder, McCaslan (green-pods) and Kentucky Wonder Wax (yellow-pod). Horticultural is grown largely as a shell bean.

## 72 Kentucky Wonder — *Brown seeded; round pods*

65 days. Most popular and dependable throughout the country. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long, in clusters. They are round, thick, meaty, tender, brittle, excellent for freezing, and are stringless when young, but develop moderate strings later as the pod matures. Though thick, the pods appear slender on account of their length. The light brown seeds have a distinctive, tasty flavor which makes them so highly desirable for use as shell beans. A profitable market bean in many sections.

### How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is past and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles, except Scarlet Runner, a pkt. of which is enough for 8 poles; 1 lb. for 60 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

# Bush LIMA BEANS

Baby Fordhook

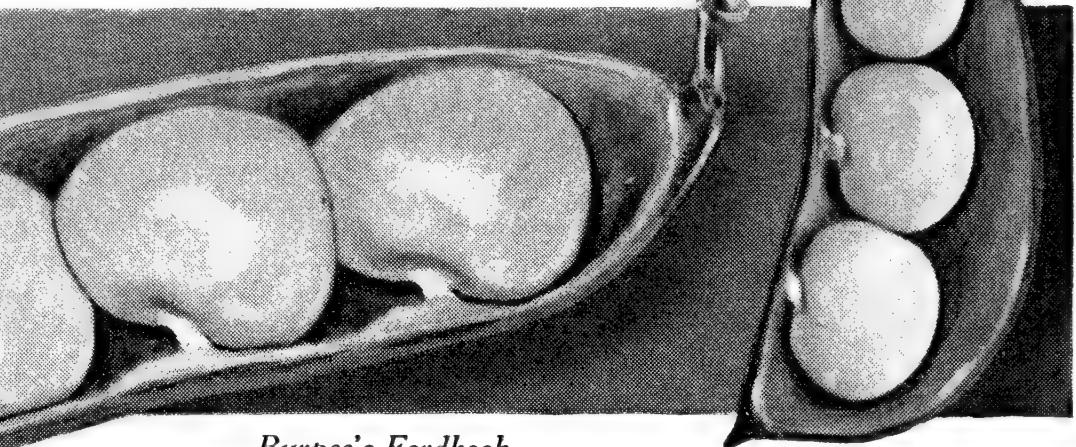

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush). Some prefer one type for eating fresh, another as dry beans or freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size.

Burpee's Improved Bush Lima

Ever since introducing the first, dwarf, large-seeded Burpee's Bush Lima, Burpee has introduced many others, including the world-famous Fordhook Bush and Burpee's Best thick-seeded Pole Lima.

Plants are bushy, upright, 20 in. or more in height, with a spread of 2 ft. or more; very vigorous, with many pod-bearing lateral branches. Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes.

### How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows 2 1/2 to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

# Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Many persons prefer the flavor of pole lima beans to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the medium-thick (Burpee's Big 6), while others prefer the flat-seeded (Burpee's Giant Podded), some choose the large-seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

## 100 Burpee's Big 6 0

88 days. Longest podded pole lima, 6 to 7 in. long,  $1\frac{1}{8}$  in. wide with usually 6 large, medium-thick, tender beans of the choicest quality and flavor. Beans have a good green color which is retained to a great extent when cooked. Plants are tall growing, excellent climbers, vigorous, dependable and heavy croppers. This wonderful new pole lima bean was developed by Burpee and we recommend it most highly for home garden, market, canning and freezing. On our Fordhook and Floradale Farms testing grounds, pods of Burpee's Big 6 average 1 in. longer than Giant Podded with 5 or 6 beans per pod of Big 6 compared to 4 or 5 of Giant Podded or King of the Garden.

## 106 Burpee's Giant Podded

Pods are  $5\frac{1}{2}$  to 6 in. long,  $1\frac{1}{4}$  in. wide, with 4 or 5 extra large, oval-flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until frost. Ideal for home gardens; also readily salable on local markets and roadside stands.

Pkt. 15¢;  $\frac{1}{2}$  lb. 45¢; lb. 80¢; 2 lbs. \$1.50; 5 lbs. \$3.50

## 103 Carolina or Sieva—"Butter Bean"

78 days. Pods grow 3 to  $3\frac{1}{2}$  in. long, and contain 3 or 4 small, flat, smooth beans of splendid quality. Quick to bear, so are especially valuable in sections with short summers, where large-seeded varieties are too late to produce well, and in localities with hot, dry summers where pods often fail to set. Also grown extensively in the South.

Pkt. 10¢;  $\frac{1}{2}$  lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.50

## 102 Florida Speckled Butter

Vigorous plants; pods medium dark green, 3 to  $3\frac{1}{4}$  in. long, each with 3 and occasionally 4 small, flat, white beans with approximately one-third of the surface marked deep purple. If picked when young, the markings on the seed will not yet have been developed. Prolific over a long bearing season. Stands up well under hot and dry weather conditions; popular home garden variety in the South.

Pkt. 10¢;  $\frac{1}{2}$  lb. 35¢; lb. 65¢; 2 lbs. \$1.20; 5 lbs. \$2.75

## 105 Burpee's Best 0—Thick seeded

A pole bean with all the good characteristics of Fordhook Bush—thick seed, rich tenderness, larger pods with three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 4 to  $4\frac{3}{4}$  in. long,  $1\frac{1}{4}$  in. broad, and  $\frac{1}{2}$  to  $\frac{3}{4}$  in. through, well filled with 4 or 5 big, plump, "potato" type beans that are exceptionally tender and have the distinctive, pleasing nutty flavor of the bush Fordhook. ### How to Grow Pole Lima Beans

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft.

# Burpee's RED BEETS

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together.

Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs or leaf-stalks as asparagus; we offer the best varieties on page 99.

Flesh is tasty, extremely dark red, free from woody fiber, and under good growing conditions, is practically free from lighter colored zones. Quality is always the finest. For a market where dark red colored flesh is a primary requirement, for canning, freezing or any commercial use, Red Ball is highly recommended. Medium tall red and green foliage. **Pkt. 15¢; oz. 40¢; 1/4 lb. \$1.10; 1/2 lb. \$2.00; lb. \$3.50**

## 115a Detroit Dark Red, Short Top ◎

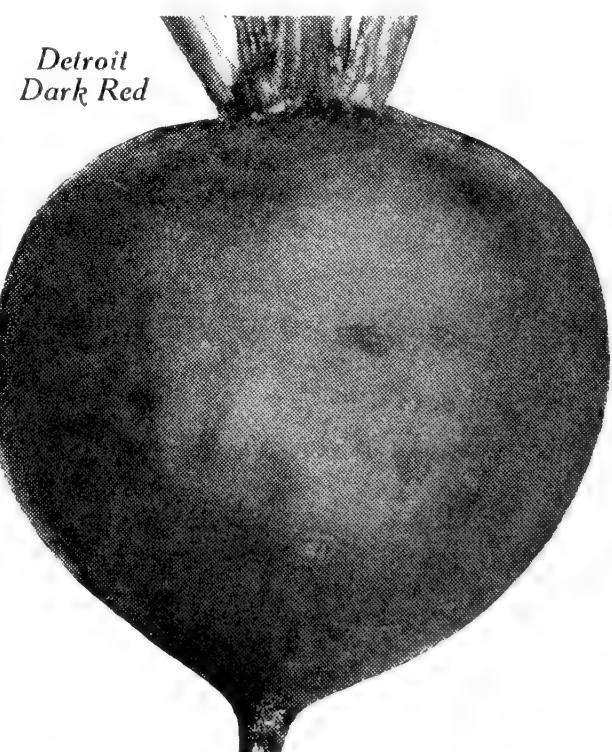

60 days. Widely used round beet for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red; always sweet and tender. Smaller tops allow beets to stand closer together in the row. **Pkt. 15¢; oz. 35¢; 1/4 lb. 95¢; 1/2 lb. \$1.65; lb. \$2.85**

Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning. **Pkt. 10¢; oz. 30¢; 1/4 lb. 85¢; 1/2 lb. \$1.50; lb. \$2.50**

### How to Grow Beets

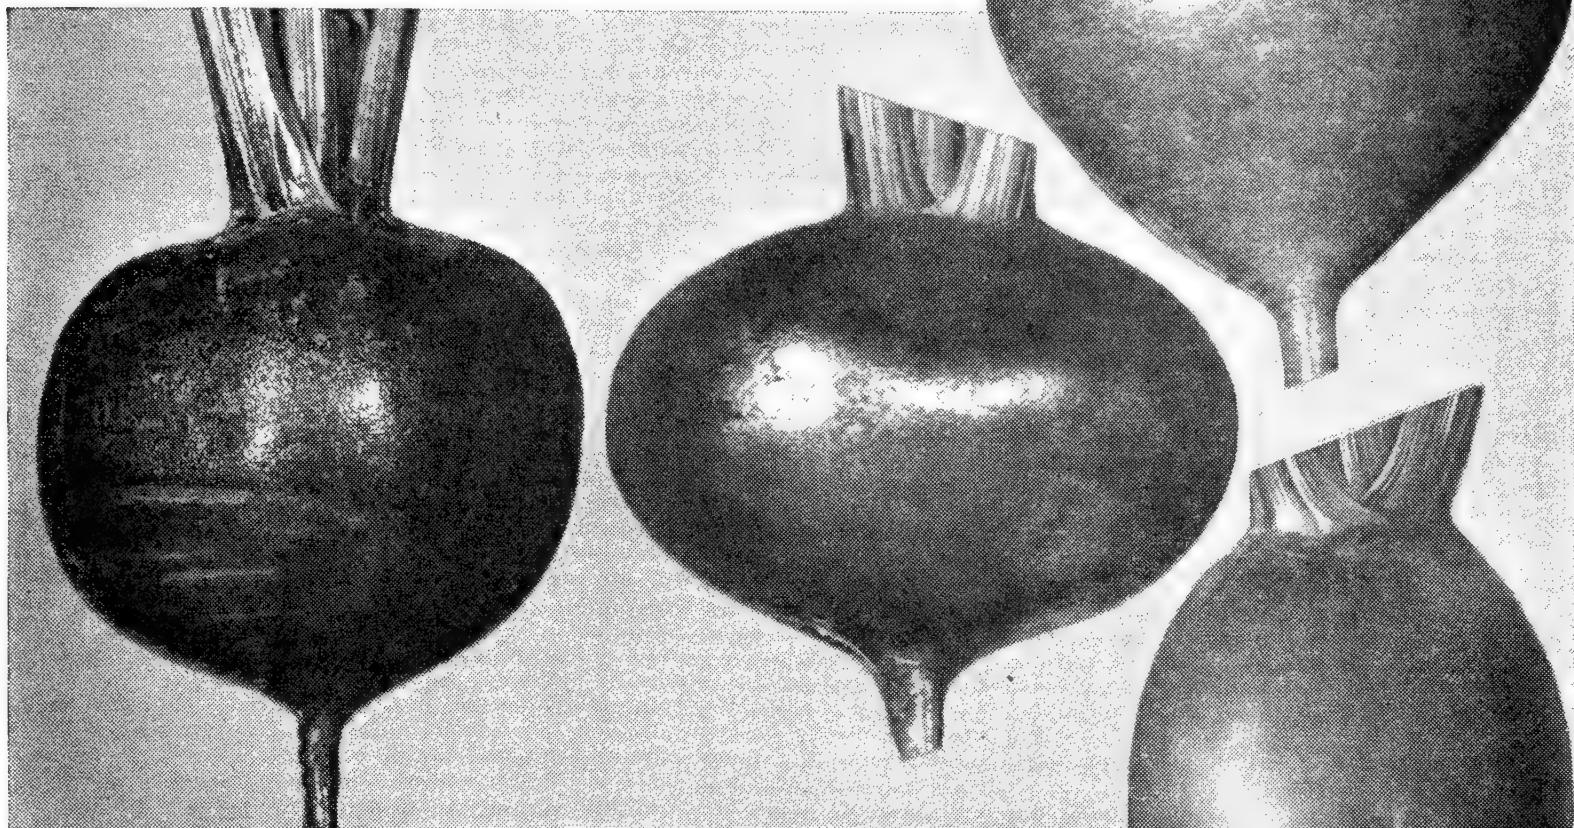

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Space rows 1 1/2 to 2 ft. apart and cover seed with 1/2 in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 2 to 3 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use throughout the winter months. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

# Burpee's Earliest CABBAGE

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some the round heads (Copenhagen Market); others, the

pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the mid-season and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing. Chinese Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage.

Burpee's  
Copenhagen Market

## 192 Burpee's Copenhagen Market ◎

72 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yield, convenient size, attractive shape, solidity and fine quality combine to make Copenhagen Market the popular early cabbage it is today. The flavor is remarkably fine so that it is also desirable for early kraut making. Reliable and uniform. First introduced in America by Burpee.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.00

## How to Grow Cabbage

For earliest crop, start early and mid-season cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seedbed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become warm. A pkt., except O-S Cross, will produce about 250 plants; an oz. about 2000 plants. Days to maturity are from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows 2 1/2 ft. apart; the large mid-season and late varieties 2 ft. apart in rows 2 1/2 to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family, had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

## YELLOWS-RESISTANT CABBAGE

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experiment Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly "yellows"-resistant varieties:

181 Golden Acre See page 66.

172 Improved Allhead Select See page 66.

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

### 214 Chihli ◎

73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanchered, white heads taper near the top. Leaves are very crisp and tender; broad, smooth and fringed at the edges. Extensively grown for market and roadside sales because the large, attractive heads sell readily; it is the most popular for the home garden where the longest head is wanted, raw or cooked.

# Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when

used with cucumbers, onions, peppers, etc., in mustard chow-chow. Cauliflower is best grown as a fall crop in the greater part of the U. S., although in regions where summers are cool, sowings may be made indoors 30 to 40 days before time to set plants in garden.

Where plants must first be grown, days to maturity given in descriptions are from the time the plants are set in the garden. The time is average and may vary somewhat in different seasons and sections.

*Burpeeana

Plants are uniform and set a crop of pure white, smooth heads noted for their tight curds. Desirable for freezing. **Pkt. 30¢; 2 pkts. 55¢; 1/4 oz. \$1.40; 1/2 oz. \$2.50; oz. \$4.50**

## 252 Improved Holland Erfurt

## 245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in Dry Weather a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, try Dry Weather. **Pkt. 25¢; 2 pkts. 45¢; 1/4 oz. \$1.00; 1/2 oz. \$1.90; oz. \$3.70**

## 251 Early Snowball—A ○

60 days. Plants small to medium in size, erect to semi-spreading, with large, wavy, medium green leaves. Heads are very firm, deep globular in shape, white in color, and of excellent quality. ## 258 Veitch's Autumn Giant

130 days. The finest late cauliflower; immense, compact white heads, 8 to 10 in. across. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive. **Pkt. 20¢; 1/4 oz. 95¢; 1/2 oz. \$1.75; oz. \$3.00**

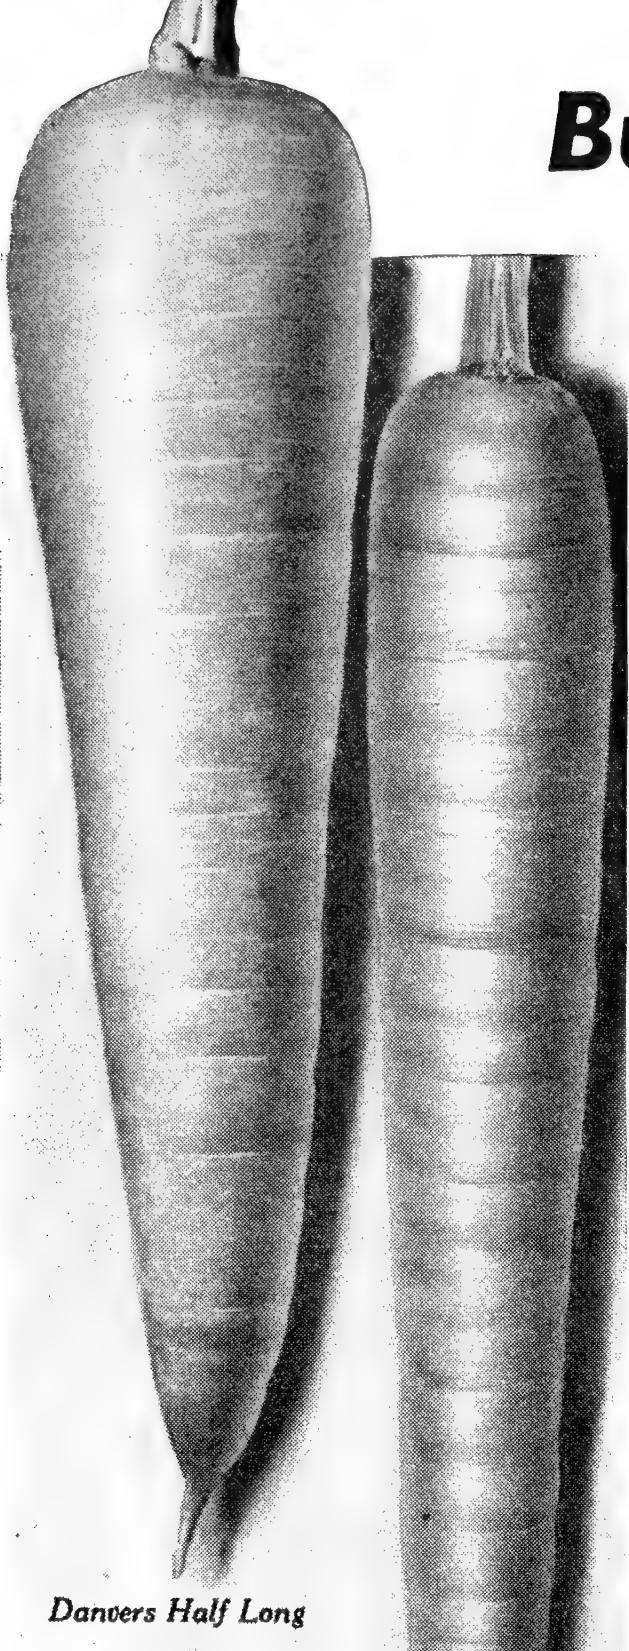

### How to Grow Cauliflower

For a main or fall crop, sow the seed thinly in a specially prepared seed bed or coldframe about 4 months before your first expected frost. Thin out from time to time to allow ample room for development. It is important that cauliflower seedlings are not allowed to become crowded in the plant bed. When plants are ready to be set in the garden, space them 1½ to 2 ft. apart, in rows 2½ to 3 ft. apart. They must always be kept in a healthy growing condition until heads are formed. Any stunting of growth, due to lack of moisture or low fertility, may prove harmful to the crop. A packet will produce about 150 plants; 1 oz. 4000.

## WINTER CAULIFLOWER

155 St. Valentine Broccoli 150 days. Large, solid, white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in the Pacific Coast area, where season is long and weather is cool. **Pkt. 20¢; 1/2 oz. 85¢; oz. \$1.50; 1/4 lb. \$5.00**

# Burpee's CARROTS

May be used at different stages of growth but are at their best if eaten when half grown or smaller. There are varied sizes and shapes to suit your purposes as well as soil conditions; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soils to Burpee's Improved Long Orange for deep mellow soils—the popular medium length carrot for all general purposes is Burpee's Goldinhart. There are many ways to use carrots—cook alone, use in soups, stews, chowders, with other vegetables or with roasts; glazed carrots with green peas are ever popular. Raw carrots may be served as a relish when chilled and cut lengthwise in slender strips; splendid when shredded and used in salads and a refreshing appetizer when served as chilled juice.

If allowed to mature, the broad, stocky, heart-shaped carrots will measure 4 to 4 1/2 in. long and 3 to 3 1/2 in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling. Good keeper.

#### How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with 1/2 in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. If too crowded, plants will grow slowly so that small, misshapen roots and unsatisfactory yields may be produced. This is especially true of all root crops. Do the thinning while plants are still small so as to disturb the roots of remaining seedlings as little as possible and be sure to firm the soil back around the plants left in the row. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall; these are the best for winter storing or may be used for immediate table use. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Burpee's Oxheart

# Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

## 272 Burpee's Fordhook ◎

**Named after Burpee's Fordhook Farms**

130 days. Without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. Time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. We offer our improved strain.

## 260 Burpee's Golden Self-Blanching ◎—Early

115 days. First introduced in America by Burpee. This is the American-grown seed produced from the dwarf French-grown stock. Grown extensively by home gardeners as well as by market growers. The plants make a compact, medium growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxy yellow color. The stalks and heart are crisp, solid, heavy, free from any strings and of the most delicious flavor. Choice table quality.

**Pkt. 15¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.25**

## 263 Cornell No. 19 ◎—Outstanding, early, yellow or self-blanching

120 days. Early, vigorous, self-blanching, and highly resistant to fusarium yellows. Plants grow 20 to 23 in. tall with thick heart, and long, deeply rounded, fairly smooth stalks. Flesh is thick, tender and without strings. Not only the heart, but the outer stalks as well are delicious to eat. Flavor is unexcelled. Cornell 19 combines the high quality of the best green celeries with the self-blanching characteristics of Golden Self-Blanching. Recommended as a main-crop yellow celery for home and market in all celery growing regions and as a midwinter crop in Florida.

**Pkt. 25¢; 2 pkts. 45¢; 1/2 oz. 85¢; oz. \$1.60; 1/4 lb. \$4.75**

## 276 Utah or Golden Crisp ◎—Thick, crisp, green stalks

130 days. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, tender, free from strings and fiber; large, well developed heart, which, when blanched, is pure white, crisp, and of the most delicious, nutty flavor. An excellent green celery for home garden, market growing, shipping and winter storage.

**Pkt. 10¢; 1/2 oz. 65¢; oz. \$1.25; 1/4 lb. \$3.75**

## 282 Giant Pascal—Known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall, thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp and very tasty. After blanching they are an attractive light yellow. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction.

**Pkt. 10¢; 1/2 oz. 65¢; oz. \$1.25; 1/4 lb. \$3.75**

## 268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers for home and market.

**Pkt. 20¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$4.25**

### How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than  $\frac{1}{4}$  in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

## 265 Utah No. 10 B—Tall growing

130 days. Slightly taller growing than the standard Utah, 26 to 28 in., stocky, erect, compact and full hearted. Stems are 8 to  $10\frac{1}{2}$  in. long, thick, rounded and waxy in appearance. Can be readily blanched; tender, crisp, and of excellent quality for home and market; the leading "Pascal" celery for shipment from California.

**Pkt. 25¢; 2 pkts. 45¢; 1/2 oz. 85¢; oz. \$1.60; 1/4 lb. \$4.75**

# CELERIAC

**(Turnip-Rooted or Knob Celery)**

293 Giant Prague 120 days. The edible portion is the large, thick root, which may be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Celery has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand for winter use.

**Pkt. 15¢; 1/2 oz. 50¢; oz. 90¢; 1/4 lb. \$2.60**

## BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous,  $2\frac{1}{2}$  ft. and more in height. They should be staked or given some other form of support.

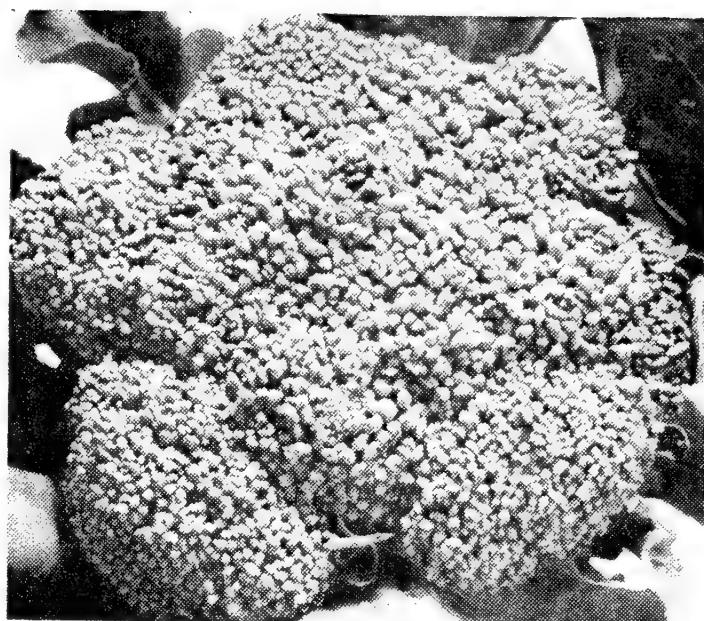

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow the seeds early in hotbed or house; transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3000.

**157 Calabrese** 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Be sure to keep green sprouts cut off before the flower buds open.

Pkt. 15¢;  $\frac{1}{2}$  oz. 35¢; oz. 60¢;  $\frac{1}{4}$  lb. \$1.75

**156 De Cicco** 78 days. Very similar in every way to Calabrese but ready a week earlier. Recommended highly for home and market.

Pkt. 20¢;  $\frac{1}{2}$  oz. 50¢; oz. 85¢;  $\frac{1}{4}$  lb. \$2.50

## BRUSSELS SPROUTS

**158 Long Island Improved** 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring  $1\frac{1}{4}$  to  $1\frac{1}{2}$  in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Easily grown thus becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

Pkt. 15¢;  $\frac{1}{2}$  oz. 50¢; oz. 90¢;  $\frac{1}{4}$  lb. \$2.70

## CHICORY — Delicious, appetizing salad

**297 Witloof (French Endive)** 110 days. A choice salad delicacy for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover with 8 to 10 in. of soil and keep in place with boards set along the sides for three or four weeks when a pure white blanched stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use as a tasty salad of mildly acid flavor.

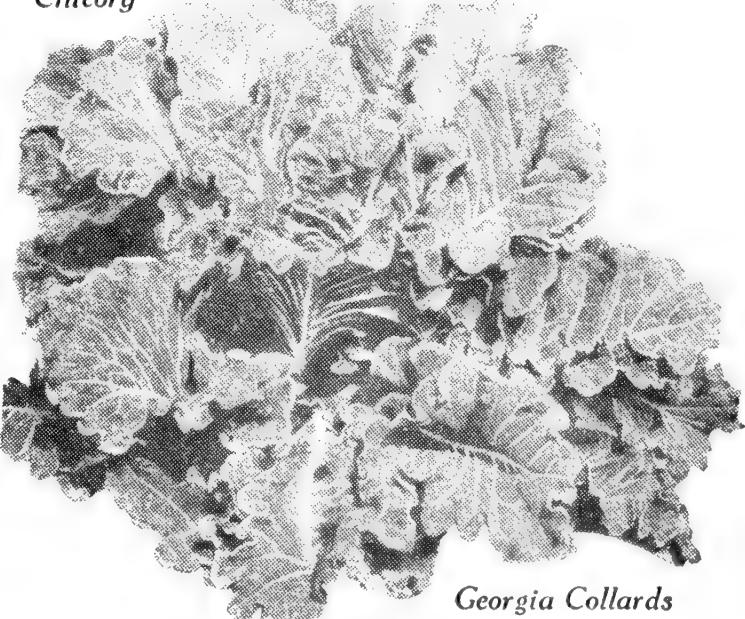

Pkt. 15¢;  $\frac{1}{2}$  oz. 45¢; oz. 80¢

## COLLARDS — One of the best boiling "greens"

Erect, spreading plants, 2 to 3 ft. tall with large, juicy, green leaves which are usually stripped from the plants as they mature thus providing delicious boiling "greens" of fine quality throughout the entire season. Will stand light freezing which improves the mild cabbage-like flavor of the leaves. Sow seeds outdoors in the spring when the soil and weather have become thoroughly warm.

# Hybrid Yellow SWEET CORN

Golden Cross Bantam

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year.

*Stowell's Evergreen Hybrid*

To enjoy Sweet Corn at its best, it should be eaten as soon as possible after ears are pulled; any delay causes loss of sweetness and quality. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties.

# Standard Yellow Sweet Corn

Burpee's Golden Bantam

## How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 8 to 12 in. apart. Some prefer to sow 4 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 or 3 plants to remain in a group. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

## 370 Burpee Hybrid — *Shown in color on back cover*

60 days. High resistance to mosaic and downy mildew are the outstanding attributes of this true first generation ( $F_1$ ) hybrid white spine, slicing type cucumber. Vines are extremely vigorous, long lived and bear an abundance of well-formed green fruits of handsome appearance, 8 in. and more long,  $2\frac{1}{2}$  in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality. Burpee Hybrid Cucumber outyields open pollinated varieties because the vines continue to produce their fruits most profusely for a long time after the others have ceased. Gardeners everywhere write us of the wonderful results they are having with this cucumber. Hundreds of testimonials could be printed but space does not permit; we are picking a few at random.

“—I have raised Burpee Hybrid Cucumbers for several years and find them far superior to any other kind that I have used. I find they do best when furnished low racks over which to climb. This method has the advantage of keeping the fruit off the ground. . . .”

R. Allen, Convent, N. J.

“—I had great success with your Burpee Hybrid Cucumbers at Westminster, Calif. The thick mats of leaves kept the heat off the fruits and there was no wilting. Far better than any other variety that I have planted in Southern California.”

H. R. Peterson, Long Beach, Calif.

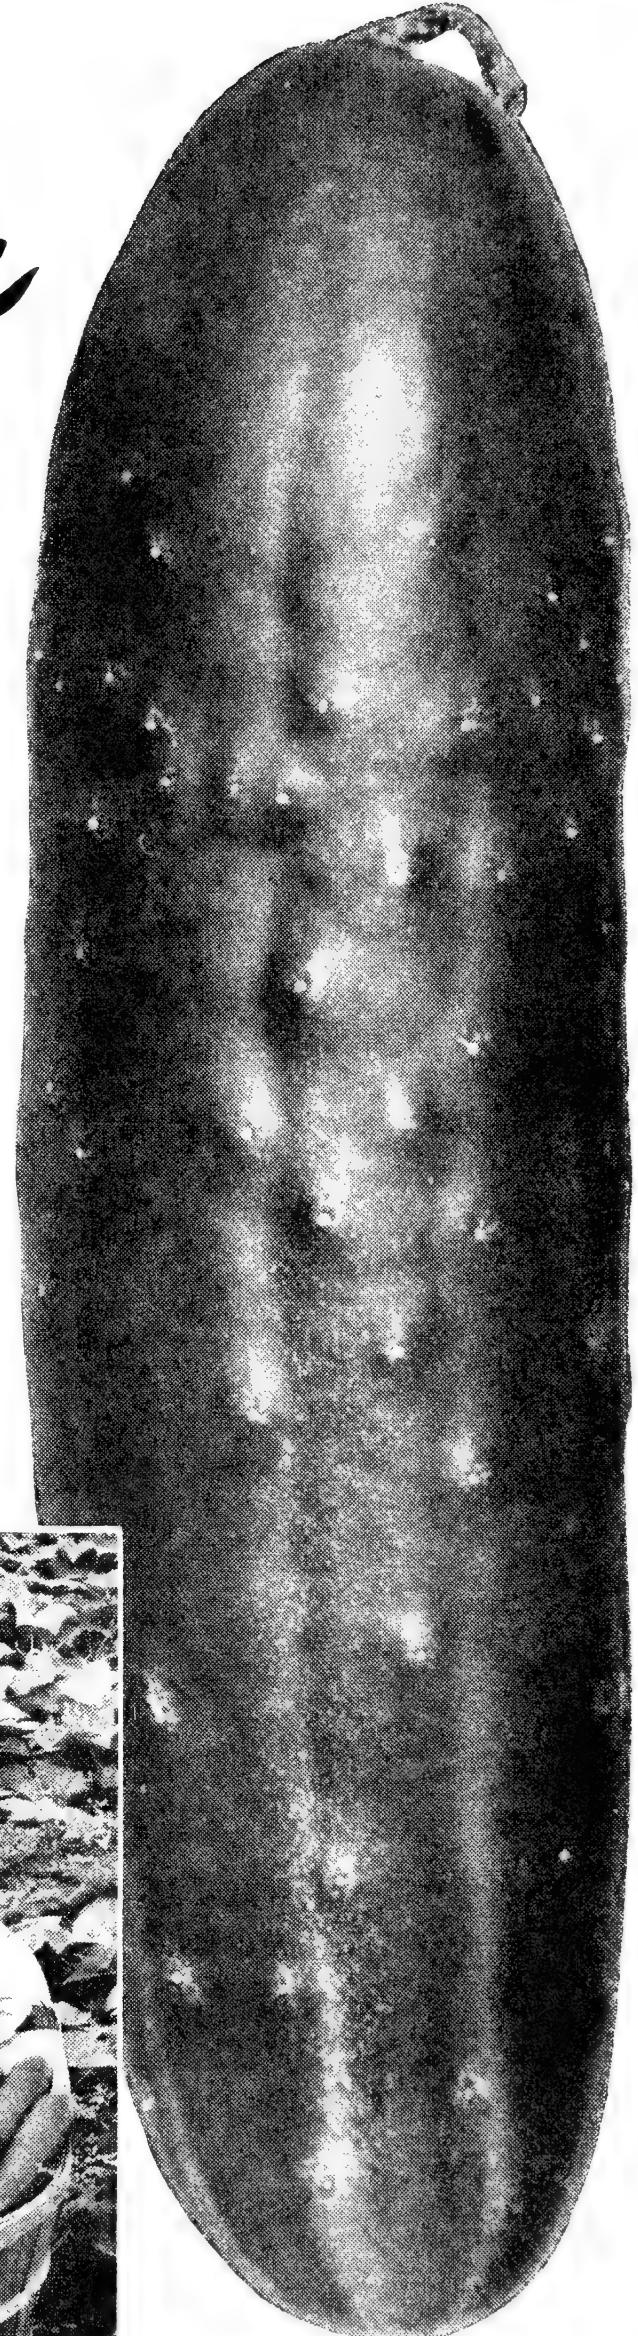

“—Last year I tried your Burpee Hybrid Cucumbers and raised such a big crop that I decided to keep count this year. I planted seven hills and left only one plant to a hill. Started gathering them in mid-July and harvested the last on September 23, the vines holding their color and remaining disease-free long after others in the neighborhood had folded up.

“Counting only the good-sized, well-shaped cucumbers, I harvested a total of 728. Not a bad yield. Thanks for having produced them. . . .”

R. T. Twitchell, Washington Depot, Conn.

# Burpee's CUCUMBERS

May be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers in the past, plant Burpee Hybrid listed on page 77. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notcher.

Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plants with a small part of the stem attached.

## 374 Burpee's Sunnybrook

— *Our extra dark streamliner for all purposes*

60 days. Burpee's Sunnybrook is an outstanding cucumber of the long, slender, dark green, white spine type with stripes absent or inconspicuous for considerably less than  $\frac{1}{4}$  its length. Fruits are 9 to 11 in. in length and 2 to  $2\frac{1}{2}$  in. in diameter when mature, tapering symmetrically toward either end; flesh is firm and thick, with few seeds which form late in the season so that the fruits are edible over a longer period than most varieties. ### Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Burpee Hybrid and all cucumbers listed on this and the following page, with the exception of Improved Long Green, are white-spined; pickling cucumbers, offered on page 79, are black-spined.

### **How to Grow Cucumbers**

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis.

Burpee's  
Black Beauty  
Eggplant

# Burpee's EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or seed-pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

## KALE—*Vitamin-rich green leafy vegetable*

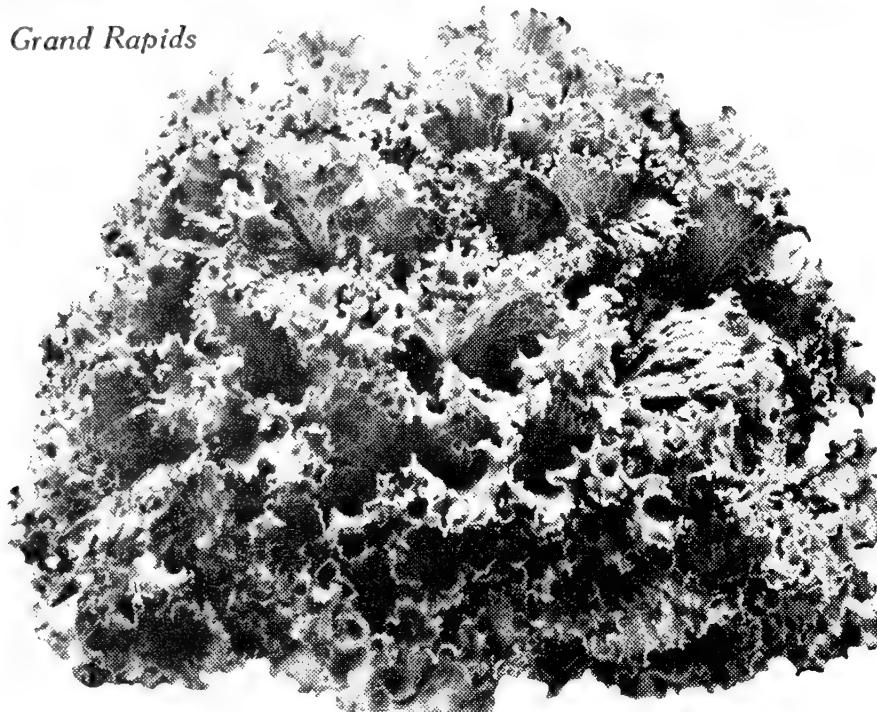

Widely used for "boiling greens." Young leaves may be chopped raw like lettuce for salads and sandwiches. # Loosehead or Cutting LETTUCE

Grand Rapids

## 485 Grand Rapids —Excellent quality

45 days. Widely grown non-heading lettuce with intensely fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, and is just as valuable for growing outdoors during the spring, summer, and fall. Regular sowing will give an abundance of young, tender leaves very early in the season, but if the plants are spaced 12 in. apart each way, they will produce immense round masses of sweet, juicy, brittle, light green leaves of good flavor. The most popular loosehead.

Pkt. 10¢; oz. 35¢; 1/4 lb. 95¢

## 489 Slobolt—Long standing; resists heat. Tender

45 days. Develops well in hot weather without producing seed stalks as quickly as other varieties. Withstands mid-summer temperatures without going to seed for two or three weeks longer than Grand Rapids, Black-Seeded Simpson and Prizehead. Foliage is light green, savoyed with waved and heavily frilled edges; tender, sweet and of excellent quality.

Pkt. 20¢; oz. 70¢; 1/4 lb. \$2.10

### 3 of the Best Lettuces

Burpee's Wayahead (Butterhead), Burpee's Iceberg (Crisp-head) and Oak Leaf (Loosehead or Cutting)

7056—3 Pkts., one each of these 3 distinct kinds, value 45¢ for only 30¢

The best type for general home garden use, especially in sections where summers are hot.

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad for, when just a few inches tall, the thinnings may be used for the table.

## 493 Black-Seeded Simpson

45 days. Splendid non-heading or cutting lettuce with broad, light green, frilled and crumpled outer leaves; center leaves blanch almost white. Grows quickly, is early and of extra fine quality. The texture of the leaves is brittle and crisp; the flavor is delicate and appetizing. We can recommend this variety for any section where lettuce can be grown either for local market or home use.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢

## 490 Early Curled Simpson

43 days. Also known as Silesia or White-Seeded Simpson. The large plants have very light green, crumpled and slightly frilled leaves that are tender, succulent, and of decidedly piquant taste. Forms a compact bunch of crisp leaves of excellent flavor. For spring and early summer.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢

## 497 Early Prizehead—Crisp, sweet

45 days. One of the most popular varieties, producing large, tender, loose heads of bright green, curled and crimped leaves which are heavily shaded with brownish red. Of excellent flavor. General home garden favorite.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢

## 541 Oak Leaf—Shaped like oak leaves

40 days. Forms a tight bunch or rosette of medium green leaves which are deeply lobed, with the end lobe elongated, giving the plant a spiky appearance. Extremely tender, long standing and of the most excellent quality.

Pkt. 15¢; oz. 60¢; 1/4 lb. \$1.75

## 535 Bronze Beauty —Distinct

40 days. One of the best leaf lettuces for home gardens. Leaves are small and long in shape, sharply cut, dark green in color, tinged with bronze, very tender and of unusually fine butter-like flavor. Is resistant to hot weather; easy to grow and remarkably uniform. Its attractive coloring makes it desirable for decorative as well as edible purposes. Again, for garnishing purposes and for use in mixed salads and sandwiches, the bronze-tinged leaf gives an unusual coloring that adds substantially to the appetizing appearance of the food. Long standing. Good quality.

Pkt. 15¢; oz. 60¢; 1/4 lb. \$1.75

## 482 Chicken Lettuce

40 days. Non-heading lettuce, quite different from those used for human food. The plants grow 4 ft. tall before they run to seed. Planted extensively for feeding poultry and rabbits. After cutting, the stumps will start to grow again, thus you will harvest another crop of large, tender, nutritious leaves for feeding within a short time. Produces most leaves of all lettuce. Not desirable for table use.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢

### How to Grow Lettuce

Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool soil, so that the seed should be sown thinly in the spring as soon as the soil can be worked, in rows 1 1/2 ft. apart; cover with 1/2 in. of fine soil. Several successive sowings may follow about two weeks apart, then discontinue sowings until late summer when they may be made to provide lettuce during the fall. Thin seedlings to stand 1 ft. apart. A pkt. will sow 50 ft. of row; 1 oz. 300 ft.

# Burpee's Crisp-Head LETTUCE

Crisp-head lettuce forms tightly folded heads and, where the plants are grown singly at a suitable distance apart, they make very large, round, solid heads which are blanched silvery white or creamy yellow in the center. Will stand more heat than the butterheads.

## 530 Burpee's Iceberg

85 days. Light green, wavy, fringed and heavily savoyed leaves with edges tinged with light brown. The heads are compact, not too large, and have few outer leaves and most delicious, crisp, tender hearts blanched to a silvery white even under average garden conditions. Will withstand some hot weather so is suited to Eastern and Midwestern growing conditions. Vigorous grower. Different from New York which is commonly called Iceberg in the produce and shipping trade.

Pkt. 15¢; oz. 40¢; 1/4 lb. \$1.20

## 516 Premier Great Lakes

80 days. A week or more earlier than Great Lakes. Heads solid, practically round; leaves trifle lighter green, the outer ones somewhat flattened, smooth without fringed margins. ## 521 Progress—Tipburn resistant

85 days. Dark green, thick-leaved, heavily savoyed, hard, cabbage-like heads of the finest quality and flavor. Highly resistant to tipburn. Recommended for home gardeners, market growers and shippers, especially for early rather than midsummer maturity. Seems to be better suited for upland rather than for muck soils.

## 522 Hanson—Dependable header

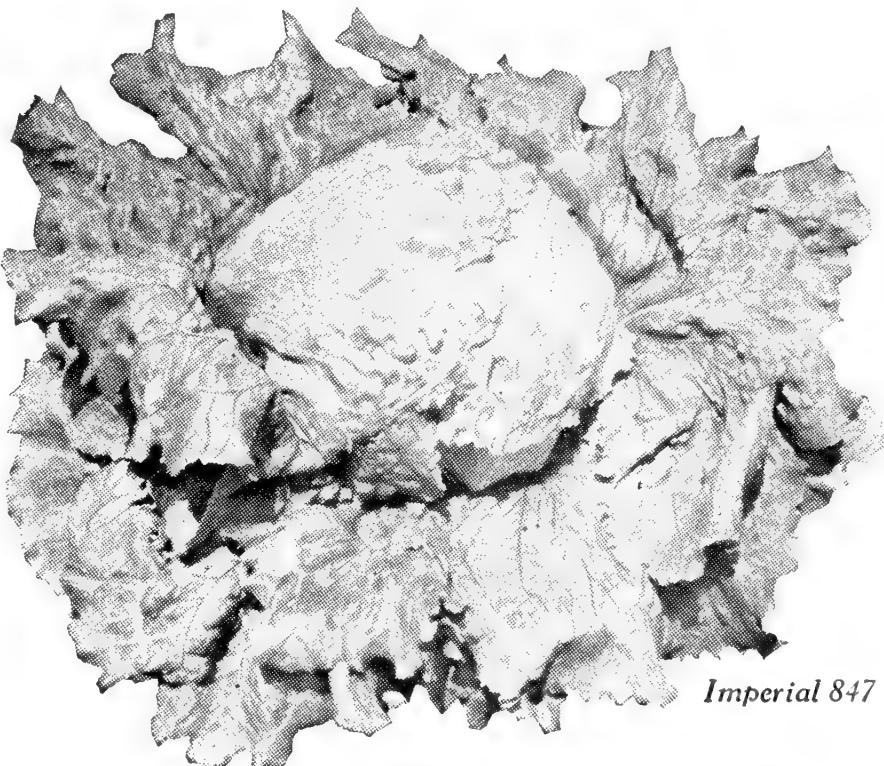

85 days. Grows into a quite broad, slightly flattened head of light green, savoyed and curled leaves of crisp texture. Of the highest quality—mild, tender, juicy and well blanched. Its reliability for sure heading, even during midsummer, is widely known to home gardeners.

Pkt. 15¢; oz. 40¢; 1/4 lb. \$1.20

## 529 Imperial No. 847 ◎

84 days. Heat-resistant strain with nearly as much ability to head under unfavorable conditions as Imperial 44. The head is larger and deeper and it retains its marketable appearance longer than that variety. Black seeded.

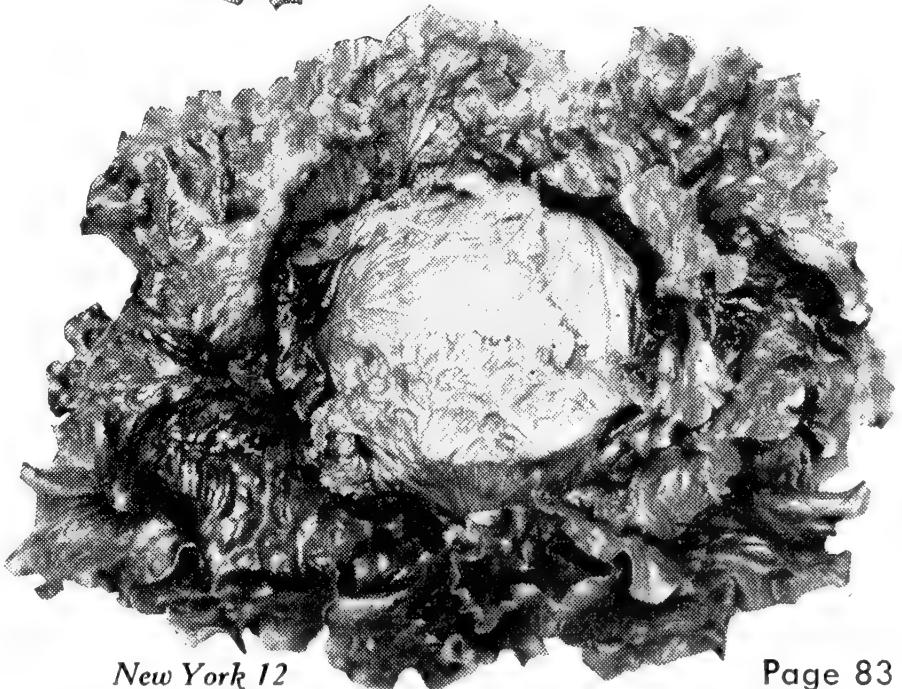

Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.35

# Burpee's Butterhead LETTUCE

White  
Boston

Butterhead lettuce develops solid heads of good form and resembles a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. In hot weather sections, they may not head as readily as the crisp-head varieties, but will grow rapidly and produce tender, tasty leaves of delicious flavor. This group includes a number of well-known varieties.

## 480 White Boston ○—Free from red tinge

80 days. The large heads are tightly folded over the top so that the solid heart blanches to a bright creamy yellow of high quality and fine texture. Outer leaves are of a uniform light green entirely free from brown markings or reddish tinge. Used extensively for home gardens and market plantings, large or small. Seed is white.

Pkt. 10¢; oz. 35¢; 1/4 lb. 95¢

## 474 Early May King—The earliest to head

540 Dark Green 84 days. Self-folded head, which is well blanched, loaf shaped, of tender and luscious quality. When fully blanched, the green leaves, which are 7 to 8 in. in height, are white with only the faintest tinge of green, and the mid-ribs are white at heart. Exceptionally crisp.

Pkt. 10¢; oz. 30¢; 1/4 lb. 95¢

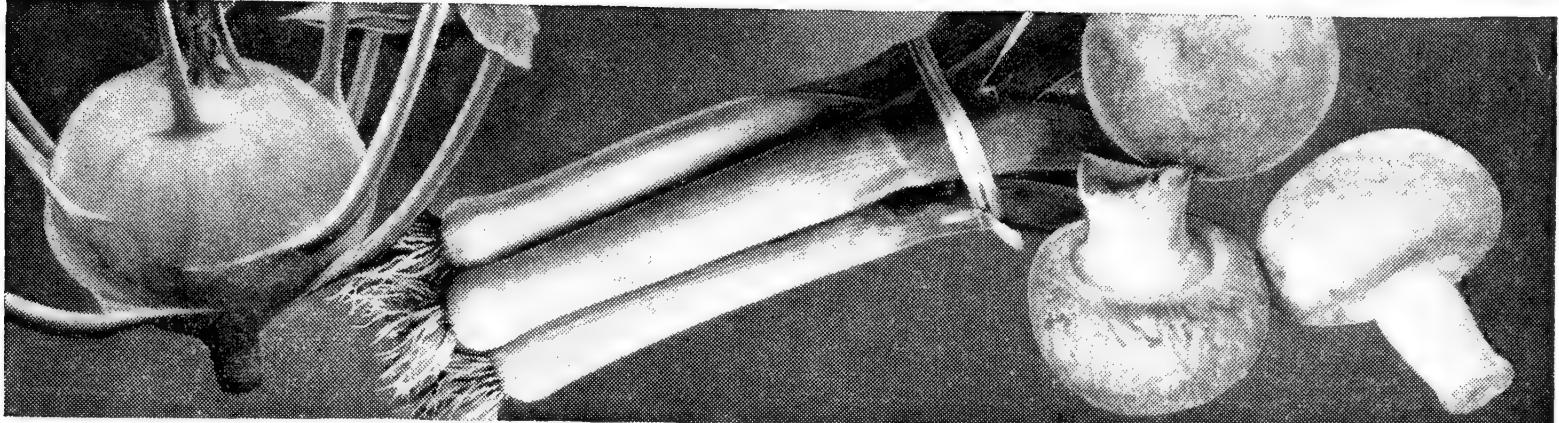

Paris White  
Cos Lettuce

## Burpee's CELTUCE

Combines the uses and flavors of CELery and LetTUCE

290 Burpee's Celtnce belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtnce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtnce stalks have a pleasing, mild flavor suggestive of celery. Young leaves have four times the vitamin C content of head-lettuce leaves.

Pkt. 15¢; 1/2 oz. 60¢; oz. \$1.10

Early White Vienna Kohlrabi

Broad London Leek

Mushrooms, Pure Culture Spawn

## KOHLRABI

The edible portion is a large bulb produced on the stem above the ground and which, if used when young, 2 to 2½ in. across, is most delicious. The sweet, fine-grained flesh has the combined flavor not unlike that of cauliflower and turnip. Sow the seed in rows 12 to 18 in. apart early in the spring and cover ½ in. deep. Thin plants to stand 6 in. apart in the row. For a continuous supply, sow every two weeks until hot weather. For fall use, sow seed in midsummer. Excellent for home and market garden, also for forcing. Cooked kohlrabi may be served with butter, salt and pepper, or with sour cream or white sauce. When young, may be chilled and served raw. A pkt. will sow about 30 ft. of row; an oz. 250 ft.

**456 Early White Vienna** 55 days. The skin is light green and very smooth; the flesh is creamy white, tender and of delicate flavor. Suitable for freezing. Dwarf growing.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

Pkt. 15¢; oz. 45¢;  $\frac{1}{4}$  lb. \$1.30

To really enjoy a muskmelon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. We offer the best varieties.

## How to Grow Muskmelons

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills" —a term that is misleading to many gardeners.

# ONION and GARLIC SETS

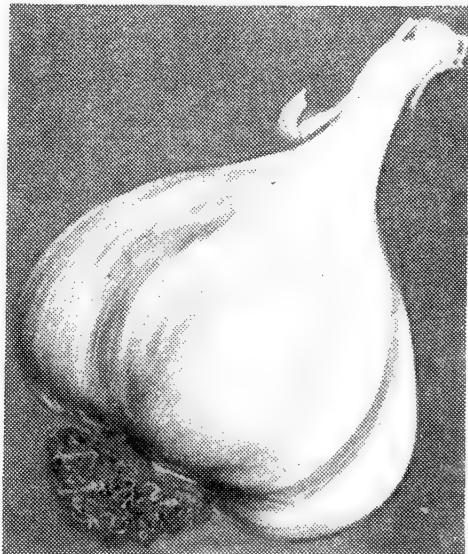

*Orders for Onion and Garlic Sets cannot be accepted after May 1*

It pays to plant Burpee's sets of the best quality which are produced under ideal conditions from a select strain of seed, carefully screened and stored at the proper temperature until they are sent to you. One lb. of onion sets will plant 50 ft. of row.

Onion and garlic sets should be planted as early in the spring as the soil can be worked. Short cultural directions are given below; full directions are sent with every order.

**9967 Yellow Onion Sets** These sets will mature into large, handsome, globe-shaped onions with bright golden yellow skin and creamy white, mild flesh. May be used in the spring as green bunching onions. Fully matured bulbs are reliable keepers for winter storing. **Lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50**

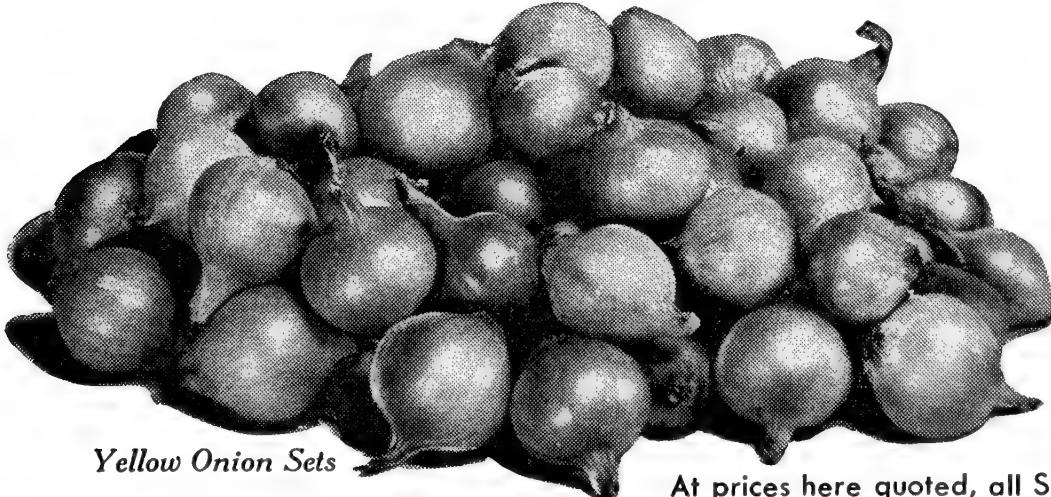

**9968 White Onion Sets** Produce round, slightly flattened, silvery white, mild onions of the highest quality. Desirable for green or bunching onions quite early in the season and are excellent for pickling when small. They will, of course, produce large onions which if left to fully mature will keep for some time in good condition. **Lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75**

### How to Plant Onion and Garlic Sets

**Onion Sets.** Make furrows about 1 in. deep, into which lightly press the sets but do not cover them. Space sets 3 in. apart in rows 12 to 24 in. apart, depending on method of cultivation to be used.

**Garlic Sets.** Each set or bulb is made up of several sections called cloves held together by a thin paper covering. Before planting, separate each set and plant the cloves 4 to 6 in. apart in rows 1 1/2 to 3 ft. apart. Cover with 1 in. of fine soil.

*Yellow Onion Sets*

## 9975 GARLIC SETS

*Extra select California grown*

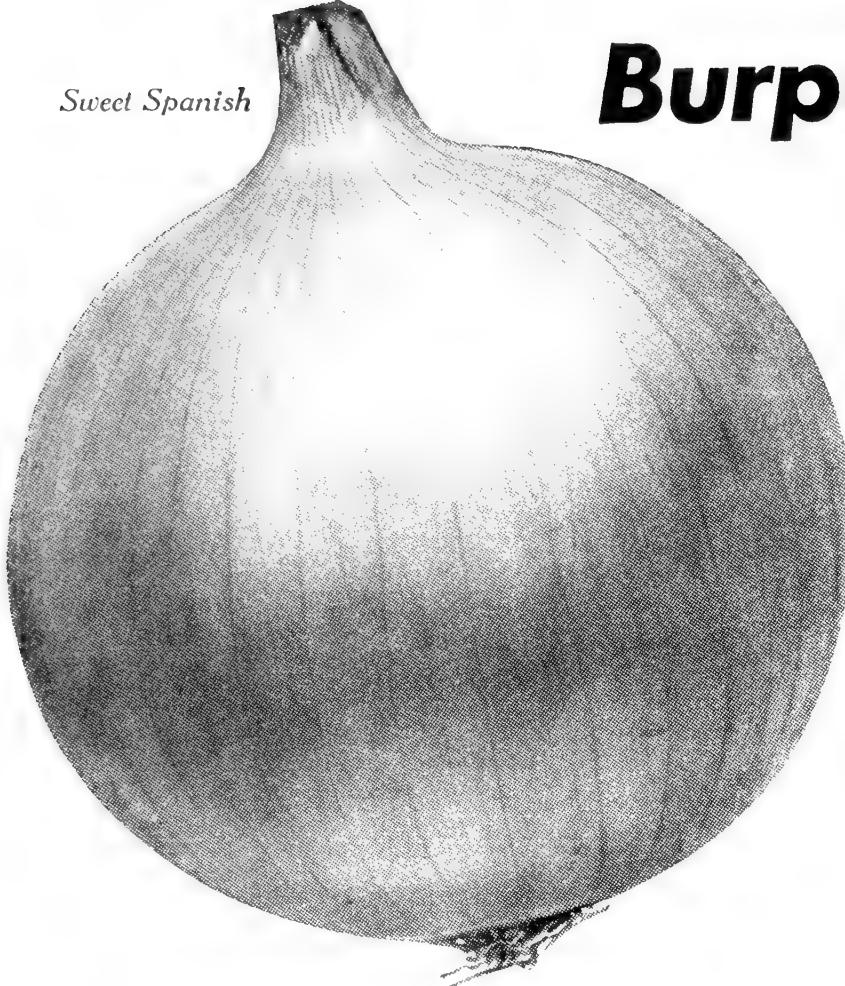

Garlic is the most pungent of the onion family, and is used for flavoring soups, stews, sausages and salad dressings. Sets are easily grown and may be kept without any trouble for use during the winter. We supply mother bulbs as pictured above; it is necessary to separate the cloves before planting. How-to-grow directions are sent with the sets.

### How to Grow Onions from Seed

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 87 for How to Grow Onions from Sets; we offer both the white and yellow.

# Wrinkled-Seeded Early PEAS

*Burpeeana Early—heavy cropper of plump pods filled with sweet peas of most delicious flavor*

Wrinkled-seeded peas, both early and main crop varieties, are favored by many for home and market growing, quick freezing and canning, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

### How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports (wire, brush or string) for the tall-growing varieties to climb upon. A pkt. will sow 20 ft. of single row; 1 lb. 100 ft.

# EDIBLE-PODDED or SUGAR PEAS

PODS ARE COOKED LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. Pods are entirely free of fiber or parchment, flat-podded except Giant Butter. Vines of the taller growing varieties should be given support of string or brush to climb upon for best results.

## 815 Mammoth Melting Sugar ◎

Roasted peanuts, salted peanuts, peanut butter and peanut candies are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2 1/2 to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the row, or place them 16 to 18 in. apart in the row if planted in the hulls. Cover with 2 in. of soil. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting. Peanuts are shipped in the hull to prevent damage to the tender seeds. California Wonder

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling either fresh or dried.

### How to Grow Peppers

Sow seed in a hotbed or indoors in shallow boxes, pots or seed-pans of rich soil, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. When the soil has become warm, set the young plants in the garden, 18 to 24 in. apart in rows 2 to 3 ft. apart. A pkt. will produce about 100 plants; 1 oz. 1500. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

# Burpee's Earliest RADISHES

## 888 Burpee White

25 days. Exceptional tenderness, mild flavor, crispiness, and remaining long in edible condition, are most outstanding qualities of this white radish. Burpee White Radishes, when young, are nearly round, juicy and sweet with pure white skin and flesh. Roots become flattened in shape as they grow, the diameter increasing with age. Best eating stage is when they measure  $\frac{3}{4}$  to 1 in. across. Grown from spring sown seed, they are still crisp, mild and tender when 2 in. in diameter. Superior in respect to available nutrients and low fiber content. **Pkt. 25¢; oz. 50¢;  $\frac{1}{4}$  lb. \$1.50**

*Burpee White—Outstanding for flavor*

## 890 Comet

*—Scarlet; All-America Winner*

25 days. Bred to meet the increasing demand for an early radish that has the same good qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; radishes are round, with an occasional olive-shaped, small tap-root; bright scarlet skin and tender white flesh which remains crisp and solid for a long time. Ideal for home and market gardens, both for field culture and greenhouse forcing. Eating and keeping qualities are surpassed by none.

## 886 Crimson Giant Globe

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe,  $1\frac{1}{2}$  in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. Remains edible for a long time; in fact it performs better than others under high temperature conditions. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Thin to a wider spacing than smaller varieties; we suggest leaving  $1\frac{1}{2}$  to 2 in. between plants in the row for full development.

**Pkt. 10¢; oz. 30¢;  $\frac{1}{4}$  lb. 85¢;  $\frac{1}{2}$  lb. \$1.55**

## 895 Cavalier

### How to Grow Radishes

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering 1/2 in. deep. Thin to stand 1 to 2 in. apart in the row. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown.

## Midseason or Summer Radish

**959 White Strassburg** 40 days. Roots are 4 1/2 to 5 in. long and 2 in. in diameter at the shoulder, tapering gradually toward the small tap-root. Skin is white and thin; flesh is mildly pungent, white, crisp, tender and of an icy texture. Widely grown for home garden use and by market gardeners in some sections for local sales. Become ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. We suggest a deep and thorough preparation of the soil to obtain the best roots. Remains long in good edible condition.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢; 1/2 lb. \$1.55

## Winter Radishes

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds. Give plants plenty of room by thinning out when young to stand 3 in. apart.

**967 Chinese Rose or Scarlet China** 55 days. Oval-shaped, 5 to 6 in. long and 2 in. in diameter at shoulder. Skin deep rose, white tip. Flesh pure white and mildly pungent. Excellent for bunching or storage as it is a fine winter keeper.

Pkt. 10¢; oz. 30¢; 1/4 lb. 90¢; 1/2 lb. \$1.60

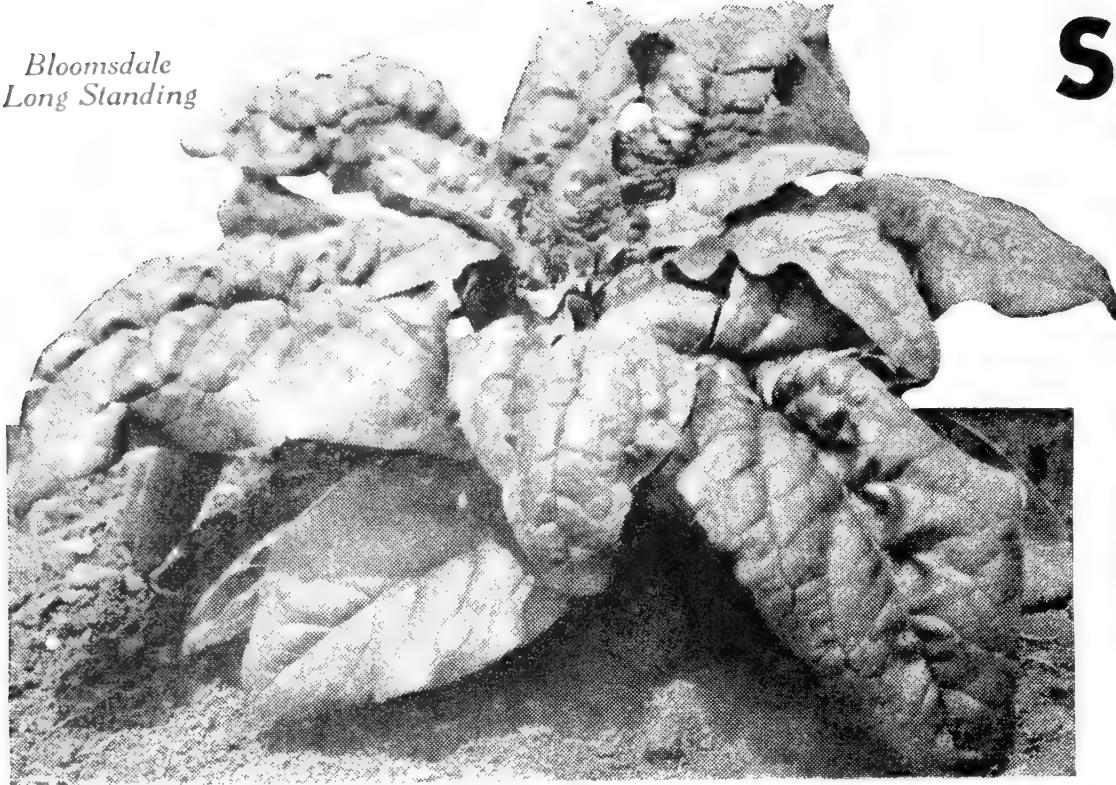

**971 Long Black Spanish** 60 days. Black-skinned with pure white flesh, crisp, solid and pungent; 7 to 10 in. long and 2 to 3 in. thick, nearly the same size at the bottom as the top.

Pkt. 15¢; oz. 35¢; 1/4 lb. \$1.00; 1/2 lb. \$1.75

**963 White Chinese or Celestial** 60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes. They remain succulent for a long time.

Pkt. 15¢; oz. 35¢; 1/4 lb. \$1.00; 1/2 lb. \$1.75

New Zealand Spinach (*Tetragonia expansa*)

# SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter? The number of days from sowing the seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this varies in different sections and season when sown.

### 1003 Virginia Blight Resistant

42 days. A greatly improved selection, the leaves of which are somewhat smoother and not so curled as Bloomsdale Reselected; they are large, dark green, extremely crisp, tender and of upright growth. It is especially recommended for planting in soil where mosaic (blight) is prevalent. Pkt. 15¢; oz. 35¢;  $\frac{1}{4}$  lb. 90¢;  $\frac{1}{2}$  lb. \$1.45

### 995 Bloomsdale Savoy Reselected

## Have a Garden This Year and Be Sure to Sow Burpee Seeds

### 1005 New Zealand

#### HOT WEATHER OR EVERLASTING SPINACH

70 days. When prepared for the table, it so greatly resembles spinach in appearance and flavor that most persons will not be aware of the difference. It makes strong plants which resist heat and produce an abundance of fleshy, brittle green leaves and young stem tips that can be picked repeatedly all during the summer and fall. Plants attain a spread of 4 ft. when fully grown and thrive in any good soil in a warm location. One sowing will do for the season. It is not hardy so cannot stand frost.

Pkt. 15¢; oz. 40¢;  $\frac{1}{4}$  lb. \$1.10;  $\frac{1}{2}$  lb. \$2.00

#### How to Grow Spinach

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

# Burpee's TAMPALA

*Amaranthus gangeticus*

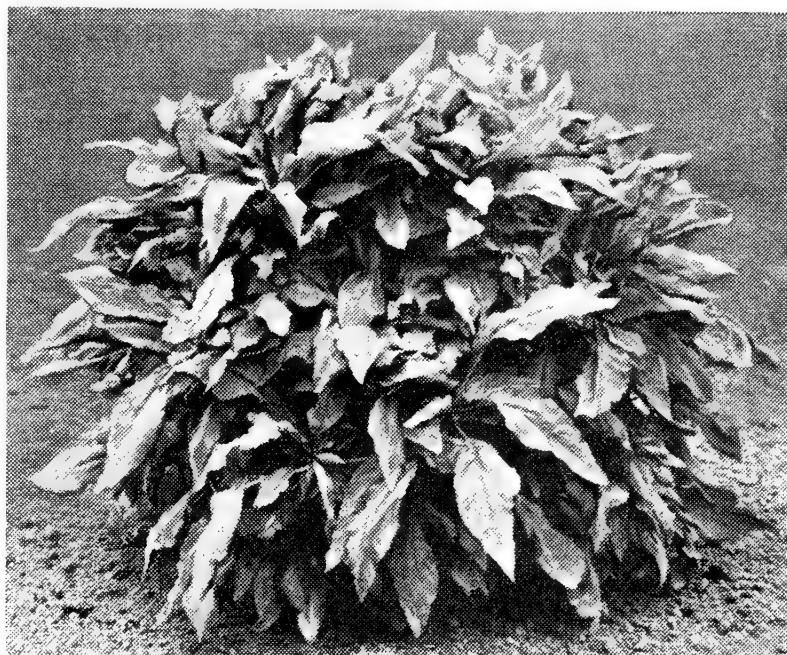

## First introduced in America by Burpee in 1944

Within 6 to 8 weeks from sowing, Tampala is ready to use when the entire plants make the most delicious "greens" either raw as a salad or cooked as you would spinach. As a cooked, canned or quickly frozen green Tampala is, in the opinion of many, superior to spinach or Swiss Chard—more appetizing color, flavor more delicious, shrinks very little, holds its color better and is easier to prepare. Give it a trial.

### 1375 Burpee Tampala—Light green

A delicious green vegetable raw or cooked which has been enjoyed by the Chinese and the people of India for centuries. Introduced by us in 1944 as "Tampala" by which name it is known in India.

Pkt. 20¢; 2 pkts. 35¢; 1/4 oz. 80¢; oz. \$2.25

Burpee Fordhook Tampala—full grown plant

### 1377 Burpee Fordhook Tampala

The darkest green-leaved selection of this newly recognized green leafy vegetable which has an unusually long period of usefulness in the summer garden. Does best when days are long.

Pkt. 25¢; 2 pkts. 45¢; 1/4 oz. \$1.00; oz. \$3.00

### 1376 Burpee Red Tampala

It is equal in all respects to Burpee Tampala and Burpee Fordhook Tampala, but instead of the leaves being green they are variegated green and red, the red extending out along the veins of the dark green leaves whose underside also is red. When cooked, prepared, and served like spinach, it is most luscious.

Pkt. 25¢; 2 pkts. 45¢; 1/4 oz. \$1.00; oz. \$3.00

### How to Grow Tampala

Being a so-called hot-weather plant, seed should not be sown until the soil has become thoroughly warm. Make several successive sowings 10 days to 2 weeks apart and, for the most tender leaves, use entire young plants when 6 to 10 in. high. However, a plant may be left every 2 ft. and leaves picked as they mature.

## SWISS CHARD

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthy and nutritious, easily grown vegetable. Chard stands hot weather and is an abundant, continuous yielder.

### 153 Burpee's Rhubarb Chard ◎

60 days. A Swiss Chard that looks like rhubarb. The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's rhubarb chard. Whether you cook the leaf-stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Leaves and stalks are nice when used in flower arrangements. We offer an outstanding, reselected, colorful strain.

Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.25; 1/2 lb. \$2.25

Burpee's Rhubarb Chard

### 135 Burpee's Fordhook Giant ◎

60 days. Named after Burpee's Fordhook Farms. Leaves are rich dark green, much crumpled or savoyed, and when grown well, will measure 10 in. in width and 2 1/2 ft. in length; texture is thick and fleshy. The pearly white stalks measure 2 1/2 in. in width and make an excellent dish prepared like asparagus. Heavy cropper.

Pkt. 15¢; oz. 35¢; 1/4 lb. 90¢; 1/2 lb. \$1.60

**136 Large Ribbed White** 60 days. Grown mostly for the broad, white, tender mid-ribs of the large, smooth green leaves. The succulent foliage is of thick texture and has a particularly nice flavor when cooked like spinach. Plenty of "greens" throughout summer and fall.

Pkt. 10¢; oz. 30¢; 1/4 lb. 75¢; 1/2 lb. \$1.25

**137 Lucullus** 60 days. Well-known variety for which some culinary experts claim first place on account of its mild, spinach-like flavor. Light green, heavily savoyed, crumpled leaves grow to large size. The thick white stalks are splendid for creaming like asparagus and provide a most appetizing dish.

Pkt. 10¢; oz. 30¢; 1/4 lb. 75¢; 1/2 lb. \$1.25

**1002 Perpetual or Spinach Beet** 50 days. A form of leaf beet somewhat similar to chard; smooth green leaves with mid-rib hardly noticeable. Resistant to heat. Good summer substitute for spinach. Quick grower and produces for a long period.

Pkt. 15¢; oz. 35¢; 1/4 lb. 90¢; 1/2 lb. \$1.45

### How to Grow Swiss Chard

Sow seed any time from early spring until midsummer in rows 18 to 30 in. apart; cover with 1/2 in. of soil. When seedlings are 3 to 4 in. high, thin 8 to 10 in. apart in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. All chards are suitable for freezing. They yield heavily wherever beets can be grown. A pkt. will sow 25 ft. of row; an oz. 100 ft.

# Summer SQUASH

Early Golden  
Summer  
Crookneck

Caserta

Burpee's  
Fordhook  
Zucchini  
Improved

Early  
White Bush

Early  
Prolific  
Straightneck

In descriptions, we give the average size of fruits when fully grown. For the best eating, summer squashes are used when immature, usually when very small; in fact, Early White (Scallop or Patty Pan) is delicious if cooked whole when very tiny—an inch or more across. Bush varieties take up little room and are especially adaptable for the small garden; running varieties need plenty of room for the vines to ramble over the ground. They may, like pumpkins, be planted among the corn, allowing 8 to 12 ft. of space for each group. See cultural directions on the next page for summer as well as winter squash.

## 1018 Early Golden Summer Crookneck ◎

53 days. The most popular summer, curved neck squash. Fruits are small, distinctly crooknecked, with bright yellow skin and salmon-orange flesh of delicious flavor and fine texture. Suitable for freezing. At their best flavor when about 4 in. long, at which size they may be prepared for boiling without being peeled. Larger fruits if left to grow may be used for boiling or fried like eggplant. Full sized fruits average 10 in. long, 3 in. thick, the skin becoming deep golden orange and much warted. Average weight, 3 lbs. Plants are of bush growth and highly productive over a long season.

Pkt. 10¢; oz. 35¢; 1/4 lb. \$1.00

## 1039 Caserta ◎ — All-America Gold Medal Winner

55 days. Yellowish green fruits irregularly mottled with dark green; 15 to 18 in. long, 4 1/2 to 5 in. thick. Flesh is tender and of delicious flavor. Bush plants; extremely prolific, nearly a week earlier than Cocozelle and continue to produce many fruits through the season. Popular for home and market. Pkt. 25¢; 2 pkts. 45¢; oz. 60¢; 1/4 lb. \$1.75

## 1027 Burpee's Fordhook Zucchini Improved ◎

65 days. Named after Burpee's Fordhook Farms. At best table stage, fruits are 12 in. long, 2 in. across, cylindrical, smooth, deep blackish green, straight to very slightly curved. If used at this size, the skin need not be removed. Flesh is creamy white and extremely tender; suitable for freezing. Allowed to grow, fruits may attain a length of 2 ft. and a diameter of 3 1/2 in.; they may be used as long as the skin can be pierced with the thumbnail. Foliage is distinct. Bush plants, small enough for any garden. Heavy producer.

Pkt. 20¢; oz. 50¢; 1/4 lb. \$1.50

## 1030 Cocozelle Bush — Italian Vegetable Marrow

60 days. Oblong, dark green fruits, 14 in. and more in length, 4 to 5 in. thick; in best edible condition if used when 6 to 8 in. long. Greenish white firm flesh of fine flavor.

Pkt. 15¢; oz. 45¢; 1/4 lb. \$1.25

## 1010 Early White Bush ◎ — White Patty Pan

54 days. Pale green fruits changing to creamy white, 7 in. across, 3 in. deep, and scalloped around the edges; milk-white, delicious flesh. Widely used for stewing or boiling. Old favorite with home and market gardeners.

Pkt. 10¢; oz. 35¢; 1/4 lb. \$1.00

## 1025 Straightneck Summer — Very popular

58 days. Golden orange straightneck, warted fruits, 18 in. long, 4 in. across. Finest salmon-yellow flesh. Its shape makes it popular with housewives as it can be prepared for the table with little loss. Preferred by shippers because fruits pack to better advantage than Crooknecks. Bush growth.

Pkt. 10¢; oz. 35¢; 1/4 lb. \$1.00

## 1028 Yankee Hybrid — Heavy yielder

50 days. This is a true first generation hybrid with waxy yellow straightneck fruits 8 in. and more long, 3 in. across. Early, heavy yielder; good quality and delicate flavor. Valuable for home and market. All-America Winner.

Pkt. 15¢; oz. 75¢; 1/4 lb. \$2.25

## 1033 Early Prolific Straightneck ◎

50 days. Fruits are creamy-yellow and edible from the time they reach a length of 4 to 6 in. until they are 12 to 14 in. long and 3 1/2 in. thick. More easily prepared for the table than curved necked fruits. Heavy yielder of fruits; smaller and earlier than Straightneck Summer. Bush plants, vigorous and very productive. Because of the straight neck, fruits can be more conveniently and economically packed for shipment in hampers or crates than the crooknecked varieties. All-America Winner.

Pkt. 10¢; oz. 35¢; 1/4 lb. \$1.00

# Fall and Winter SQUASH

All, except the Banana squashes, produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter va-

rieties, except Banana, must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

## 1038 True Hubbard ◎ — Widely used for home, market and shipping

115 days. Fairly large fruits with dark bronze-green warted skin, the toughness of which makes it a favorite for shipping and winter use; if properly stored, will keep until spring. 12 in. long and 10 in. thick; weigh about 12 lbs. Attractive deep orange-yellow flesh which is fine-grained, sweet and dry. The standard winter squash for all purposes, whether for freezing, home, market or shipping. The shell is rough and very hard, so keeping qualities are good; flesh is bright yellow-orange, fine-grained, dry and exceptionally sweet. Desirable for freezing. Squashes grow 15 to 18 in. long and 9 to 12 in. across; average weight, 15 lbs. Fruits bulge at the middle, tapering sharply at each end; skin is slightly ridged. Easily stored during the winter.

Pkt. 15¢; oz. 40¢; 1/4 lb. \$1.20

## 1040 Warted Hubbard

### How to Grow Squash

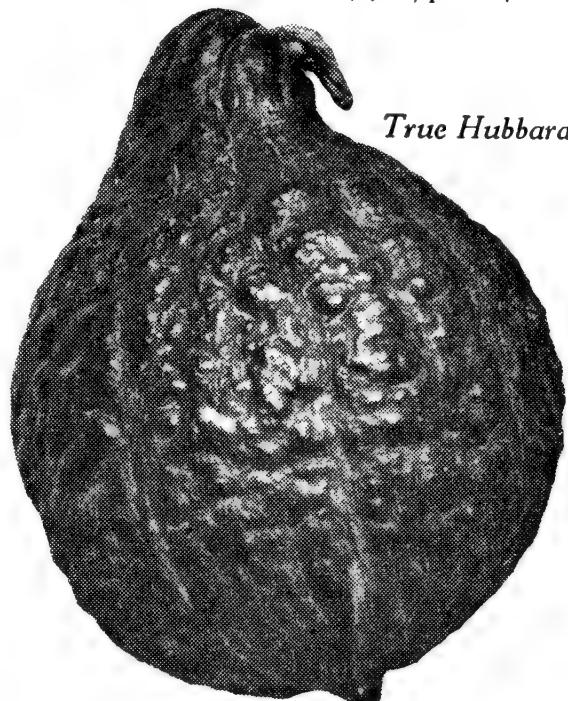

**Summer Squash.** Sow seed after all danger of frost has passed. Put 5 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 3 or 4 of the strongest plants remain in a group; running varieties allow 2 or 3 plants to a group. A pkt. will plant 8 to 10 groups; an oz. 30 to 40 groups.

**Winter Squash.** Sow seed in the same way as given above for the running varieties of summer squash; 4 seeds in a group is sufficient. A pkt. will plant 6 to 8 groups; 1 oz. 20 to 30 groups. All varieties of squash grow best in a fertile, deep soil.

## 1037 Burpee's Bush Table Queen ◎

80 days. Developed on Fordhook Farms. Fruits are similar in size, shape and color to those of the green fruited Table Queen vine variety, described below; the flesh is of better quality. Plants, however, are of semi-bush growth, produce just as many fruits per plant as the vine variety but take less space in the garden so may be planted closer. Excellent keeper.

### How to Grow Turnips

Sow the Milan and Foliage varieties in the spring as soon as the soil can be worked; space rows 12 to 15 in. apart. Thin seedlings to stand 2 to 4 in. apart in the row. For succession, make 2 or 3 sowings at two-week intervals. For fall and winter crop, sow in late summer in rows or broadcast about 3 months before your first expected hard frost. A pkt. will plant about 50 ft. of row; an oz. 250 ft.

# RUTABAGAS or SWEDE TURNIPS

Rutabagas require a longer season to mature than turnips and are best grown as a fall crop. Sow seed from early to late midsummer, in rows 15 to 24 in. apart. Cover with 1/2 in. of fine soil and thin the seedlings to stand 6 to 8 in. apart in the row. May be stored in a cool cellar or pit and used throughout the winter. ### IMPORTANT—PLEASE READ HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes have the ability to produce larger plants and higher yield they must be fed more than standard tomatoes. Therefore, to produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of planting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom or set their first fruit. Keep well watered during dry spells.

Each hybrid tomato seed is produced by hand pollination which requires a great deal of work and entails a heavy expense. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will repay you in better fruits and a bigger yield.

## 1131 BURPEE'S BIG BOY

*Shown in color on the inside back cover*

78 days. Largest of our true, first generation (F<sub>1</sub>) Hybrid tomatoes; unsurpassed in every way.

Well grown fruits average 10 ozs. with some weighing 1 lb. or more. Unlike other large fruited varieties, Big Boy tomatoes are perfectly smooth, deep globe to deep oblate in shape and very firm; scarlet-red skin, thick walls, with bright red meaty flesh of fine flavor and excellent quality. At its peak of performance in midseason, although large fruits are produced late in the season when many standard varieties decline in yield and size of fruit. An ideal hybrid for the home garden and market grower, especially roadside sales.

Plants are very large, extremely vigorous, semi-upright to spreading; moderately dense dark green foliage protects the fruits from sun scald.

Pkt. (30 seeds) 50¢; 2 pkts. 90¢;  
3 pkts. \$1.25; 5 pkts. \$1.90

“—I have been raising tomatoes for 20 years, but your Big Boy is the best I ever grew. I cannot praise it enough. It is all you claim it to be and then some. Four tomatoes weighed 3½ lbs. . . .”

R. Calderone, Akron, Ohio

“—Burpee's Big Boy Tomato plants grew 6 and 7 ft. high, one with 92 fruits on it; every one of my 33 vines had 50 or more tomatoes on them, the fruits ranging from 10 ozs. to 1 lb. each. One of my visitors told me he had been growing tomatoes for 22 years and never saw or heard of any like Big Boy. . . .”

A. J. Thrun, Buffalo, N. Y.

### How to Grow Tomatoes

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. Light, friable soil of medium fertility is best for starting the seed. Cover seed with  $\frac{1}{4}$  in. of fine soil or sand. Keep soil moist but not too wet and avoid excessive drying. If seed is sown in container, keep it in a warm place (65 to 70°). When seedlings are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past in rows 3 to 4 ft. apart each way, if to be grown untrained and unpruned; if supported on stakes, plants may be set 18 to 24 in. apart in the row, except hybrids, which should be spaced 2 to 2½ ft. apart in the row. Disturb roots as little as possible when transplanting.

If you stake your plants, train them to a single stem and pinch off side shoots when very small. These side shoots develop at the joint where a leaf joins the main stem. Keep a close watch for such shoots, as it takes only a few days for them to grow into a branch of good size, when they are more troublesome to remove.

Where summers are long, seed of standard varieties may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. Days to maturity given in the descriptions are from field setting of the plants until first usable fruits are ready. Sizes and weights of tomatoes mentioned in descriptions are for the general field-run of fruits. A pkt. of standard tomato seeds will produce about 200 plants; 1 oz. 5000 to 6000.

## 1133 BURPEEANA EARLY HYBRID

58 days. Distinctly different extra early, true, first generation ( $F_1$ ) hybrid tomato created at Burpee's Fordhook Farms, to offset the usual shortcomings of many of the open-pollinated early varieties. Mulching tomato plants with a heavy layer of straw to retain soil moisture usually results in larger yields over a longer period of time, cleaner fruits, less cracking and less loss from blossom-end rot; it keeps down weeds, too, which is quite important.

### EXPLANATION OF CERTIFIED TOMATO SEED

Seed listed as "**Certified**" is produced from crops that were inspected and certified as to freedom from seed borne disease by the Agricultural Department of the state in which they were grown. It is well worth the slight additional cost.

standard varieties, value 50¢ for only 40¢

# Burpee's Jubilee Tomato ◎

*Orange skinned, orange fleshed*

**1111 Jubilee** compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Fruits are bright golden orange, deep-globular,  $2\frac{1}{2}$  to  $3\frac{1}{4}$  in. across,  $2\frac{1}{4}$  to  $2\frac{3}{4}$  in. in depth, heavy and really delicious; the orange colored interior is modern, thick-walled, with rather small seed cells and relatively few seeds. Most attractive when sliced and does not leak when cut. Makes delicious juice. Very high in vitamins A and C. Nice if served alone or with red fleshed varieties. Being of mild but definite flavor and free of acidity, they are preferred by many to the best red tomatoes. If you have not enjoyed the delicious flavor and good eating qualities of Burpee's Jubilee, an All-America Winner, be sure to grow it this year. Ready in about 72 days.

## How to Grow Watermelons

Plant seed after all danger of frost has passed and the soil has become thoroughly warm. Place 6 to 8 seeds in groups, allowing 2 to 3 in. between the seeds and space the groups 6 to 8 ft. apart each way. Cover seed with 1/2 in. of fine soil. Thin to 2 or 3 plants in each group after plants are well established. Rich, rather sandy soils produce the finest watermelons, but a well-drained loam is also suitable. A pkt. will plant 6 groups or so-called "hills"; 1 oz. about 30 groups.

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leafmold. Once established, they will increase in beauty each year. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. Order 6 bulbs of the same variety at  $\frac{1}{2}$  the 12 rate. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs.

# Burpee's GLADIOLUS BULBS

Burpee's famous gladiolus are grown and admired wherever beautiful flowers are known. They make attractive displays in the garden, planted either in beds or in groups here and there in perennial or annual borders and are ideal for house decoration. If the spikes are cut when the bottom flower shows color, all the buds, clear to the top, will open. Gladiolus are easily grown in any good, well-drained soil. Our bulbs are large,  $1\frac{1}{4}$  in. and more across, guaranteed to bloom.

Cultural directions are printed on every bag containing the bulbs.

# Burpee's *Floradale Farms* IN CALIFORNIA

Floradale Farms were established 41 years ago, especially for the production and further development of Sweet Peas. Soil and climate are such that other flowers and vegetables grow to perfection and produce strong, healthy seeds of the highest germination and quality—much better than those grown elsewhere. Evidence of their merit is attested to by the numerous awards won by Burpee flowers and vegetables. Floradale has produced many outstanding new varieties for the gardens of the world. The name Burpee is your Guarantee of Quality.

David Burpee with one of his latest creations, Giant Ruffled Tetraploid Snapdragons, familiarly known as Tetra Snaps.

because of outstanding contributions to the Science of Agriculture and in recognition of his accomplishments in Horticulture and in the production of new and improved varieties of Flowers and Vegetables.

J. GORDON FETTERMAN

April twenty-sixth, 1950.

President

W. Atlee Burpee, 3rd, grandson of the founder, and manager of Floradale Farms, shoulder-high in Sweet Peas. Burpee Sweet Peas have been world-famous for more than half a century, the Giant Ruffled class being the most outstanding development in recent years. Two new varieties are being introduced by us this year—Ruffled Blue Improved and Lavender Ruffles. Another is Fragrance, the most fragrant of all Sweet Peas. No effort or expense is spared on our various farms to produce the Best Seeds that Grow.

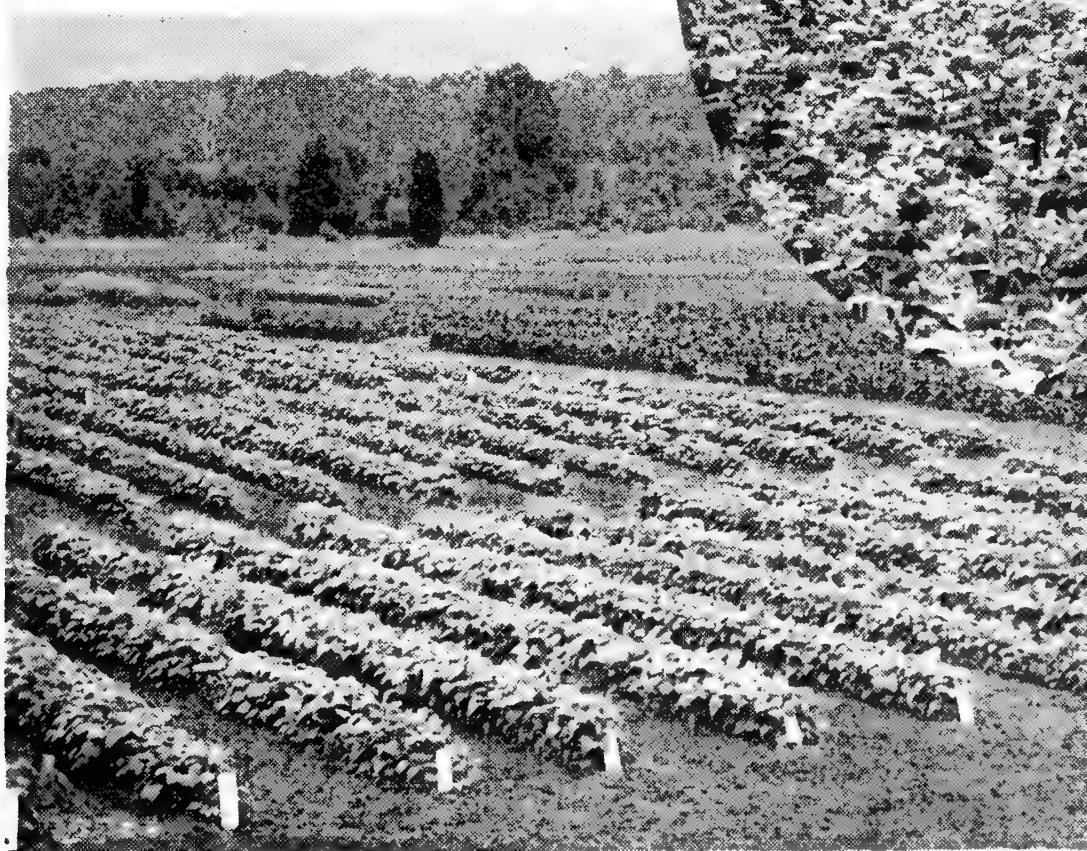

Petunias are another Burpee specialty. Among our noteworthy creations are the Alldoubles, the Multi-flora ( $F_1$ ) hybrids and other well-known bedding varieties. Above is pictured the new distinctive Tally-Ho growing for seed on Floradale Farms. Note the profusion of blooms. It is an unforgettable sight to see acres upon acres of petunias, zinnias, asters, marigolds, snapdragons, etc., growing at Floradale and our Santa Paula Farms to provide you with the newest and best for your garden.

# Burpee's *Fordhook Farms* IN PENNSYLVANIA

Two of the Burpee vegetable experts comparing and carefully noting onion varieties in the testing grounds at Fordhook Farms.

Testing the new Giant Zinnias, Burpee Hybrids at Fordhook Farms. Records are kept throughout the growing season showing size and quantity of flowers, colors in the right proportion for the best effect, habit of plant growth and other details, in order to maintain the high standard of this wonderful zinnia and all other varieties of seeds offered by us. On this and the opposite page are a few pictures taken at our farms which we hope you will find interesting.

This picture shows only a small part of the bush bean trials at Fordhook. It was here that we discovered Tender Pod, the most delicately flavored, the most tender and the most succulent green-pod bush bean for the home garden, canning and freezing. Matures early and is productive over a long period.

**BURPEE SEEDS GROW**

Fordhook is the best known seed farm in the world and was established before the U. S. Department of Agriculture had any experiment stations.

All Burpee Seeds and Bulbs are tested annually at Fordhook and, in addition, breeding is carried on extensively to improve existing varieties and to create new ones. Breeding, selection and experimental work, as well as seed growing, are the most exacting parts of our business.

Some of today's best vegetables were named after Burpee's Fordhook Farms, notably Fordhook Bush Lima, Fordhook Celery, Fordhook Pepper and many others.
